Dimensions of Affine Deligne–Lusztig Varieties: A New Approach Via Labeled Folded Alcove Walks and Root Operators

- Introduction
- Preliminaries on Weyl groups, affine buildings, and related notions
- Labelings and orientations, galleries, and alcove walks
- Dimensions of galleries and root operators
- Affine Deligne–Lusztig varieties and folded galleries
- Explicit constructions of positively folded galleries
- The varieties $X_x(1)$ in the shrunken dominant Weyl chamber
- The varieties $X_x(1)$ and $X_x(b)$
- Conjugating to other Weyl chambers
- Diagram automorphisms
- Applications to affine Hecke algebras and affine reflection length
- Bibliography
