

Contents

Chapter 1. Introduction	1
Chapter 2. Main results	9
1. Minimal systems of waves and propagating terraces	10
2. The case where 0 and γ are both stable	12
3. The case where one of the steady states $0, \gamma$ is unstable	17
4. The ω -limit set and quasiconvergence	20
5. Locally uniform convergence to a specific front and exponential convergence	21
Chapter 3. Phase plane analysis	25
1. Basic properties of the trajectories	25
2. A more detailed description of the minimal system of waves	32
3. Some trajectories out of the minimal system of waves	37
Chapter 4. Proofs of Propositions 2.8, 2.12	53
Chapter 5. Preliminaries on the limit sets and zero number	55
1. Properties of $\Omega(u)$	55
2. Zero number	55
Chapter 6. Proofs of the main theorems	59
1. Some estimates: behavior at $x = \pm\infty$ and propagation	60
2. A key lemma: no intersection of spatial trajectories	61
3. The spatial trajectories of the functions in $\Omega(u)$	64
4. $\Omega(u)$ contains the minimal propagating terrace	66
5. Ruling out other points from $K_\Omega(u)$	67
6. Completion of the proofs of Theorems 2.5, 2.13, and 2.15	72
7. Completion of the proofs of Theorems 2.7, 2.9, and 2.17	74
8. Completion of the proofs of Theorems 2.11 and 2.19	78
9. Proof of Theorem 2.22	80
Bibliography	85
