Introduction to Subgroup Decomposition	1
The main theorem, slightly simplified	2
Rotationless versus $\text{IA}_n(\mathbb{Z}/3)$ (Part II)	3
The main theorem, full version	4
The relative Kolchin theorem for $\text{Out}(F_n)$ (Part II)	6
Geometric models (Part I)	8
Vertex group systems (Part I)	9
Weak attraction theory (Part III)	9
Relatively irreducible subgroups (Part IV)	11
Part I. Geometric Models	15
Introduction to Part I	17
Chapter 1. Preliminaries: Decomposing outer automorphisms	23
1.1. F_n and its subgroups, marked graphs, and lines	23
1.2. Subgroup systems carrying lines and other things	31
1.3. Attracting laminations	35
1.4. Principal automorphisms and rotationless outer automorphisms	36
1.5. Relative train track maps and CTs	39
1.6. Properties of Attracting Laminations	54
Chapter 2. Geometric EG strata and geometric laminations	65
2.1. Defining and characterizing geometric strata	65
2.2. Complementary subgraph and peripheral splitting	78
2.3. The laminations of a geometric stratum	81
2.4. Geometricity is an invariant of a dual lamination pair	91
2.5. Stabilizing its complement also stabilizes the surface	92
2.6. Preserving the free boundary circles	95
Chapter 3. Vertex groups and vertex group systems	103
3.1. Vertex group systems	103
3.2. Geometric models and vertex group systems	105
Part II. A relative Kolchin theorem	109
Introduction to Part II	111
Chapter 1. Statements of the main results	113
Chapter 2. Preliminaries	117

2.1.	Polynomial growth relative to a free factor system.	117
2.2.	F_n -trees	118
2.3.	One-edge extensions: free factor systems versus graphs	119
2.4.	Asymptotic data: attracting laminations, eigenrays, and twistors	120
2.5.	Complete splittings rel G_r	125
2.6.	Fixed subgroup systems	126
Chapter 3. An outline of the relative Kolchin theorem		129
Chapter 4. $\text{IA}_n(\mathbb{Z}/3)$ periodic conjugacy classes		133
4.1.	Reduction to: F_n is filled by the θ -periodic conjugacy classes	134
4.2.	Each CT $f: G \rightarrow G$ representing ϕ is geometric/linear/fixed.	134
4.3.	The case that $\cup \mathcal{L}(\theta)$ fills.	135
4.4.	The case that $\cup \mathcal{L}(\theta)$ does not fill: a one-edge extension.	138
4.5.	The case that $\cup \mathcal{L}(\theta)$ does not fill: conclusion.	140
Chapter 5. $\text{IA}_n(\mathbb{Z}/3)$ periodic free factors		147
5.1.	Reduction to one-edge extensions: Proposition 5.1	147
5.2.	Relative Nielsen classes and the path set Γ	149
5.3.	Proof that $\text{IA}_n(\mathbb{Z}/3)$ periodic free factors are fixed: Theorem 3.1	157
Chapter 6. Limit Trees		161
6.1.	Iteration of growers	162
6.2.	Iteration of nongrowers	164
Chapter 7. Carrying asymptotic data: Proposition 3.4		169
7.1.	Carrying eigenrays	169
7.2.	The exponential growth digraph for twistors	170
7.3.	Bouncing sequences	175
Chapter 8. Finding Nielsen pairs: Proposition 3.7		179
Part III. Weak Attraction Theory		189
Introduction to Part III		191
Chapter 1. The nonattracting subgroup system		195
1.1.	The nonattracting subgroup system $\mathcal{A}_{\text{na}}(\Lambda_\phi^+)$	196
1.2.	Applications and properties of the nonattracting subgroup system.	201
1.3.	Weak convergence and malnormal subgroup systems.	203
Chapter 2. Nonattracted lines		205
2.1.	Characterizing nonattracted lines: Theorem G	205
2.2.	Concatenating special nonattracted lines	208
2.3.	Proof of Theorem H	212
2.4.	Nonattracted lines of EG height: the nongeometric case.	213
2.5.	Nonattracted lines of EG height: the geometric case.	216
2.6.	General nonattracted lines: Proof of Theorem G	229
Part IV. Relatively irreducible subgroups		235
Introduction to Part IV		237

Chapter 1. Ping-pong on geodesic lines	241
1.1. Finding attracting laminations by the “three over one” criterion	241
1.2. The ping-pong argument	242
Chapter 2. Proof of Theorem C	249
2.1. Reduction to Theorem I	249
2.2. Constructing a conjugator	250
2.3. Driving down $\mathcal{A}_{\text{na}}(\Lambda_\phi^\pm)$	252
2.4. Driving up $\mathcal{F}_{\text{supp}}(\mathcal{F}, \Lambda_\phi^\pm)$: Proof of Theorem I	256
2.5. Relatively geometric irreducible subgroups: Theorem J	261
Chapter 3. A filling lemma	267
Bibliography	271
