

Contents

Chapter 1. Introduction	1
1.1. Laminations	1
1.2. “Pinched disk” model of the Mandelbrot set	3
1.3. Previous work	5
1.4. Overview of the method	6
1.5. Main applications	9
1.6. Organization of the paper	13
1.7. Acknowledgments	14
Chapter 2. Invariant laminations: general properties	15
2.1. Invariant geodesic laminations	15
2.2. Laminational equivalence relations	18
2.3. General properties of invariant geodesic laminations	22
Chapter 3. Special types of invariant laminations	29
3.1. Invariant geodesic laminations with quadratically critical portraits	29
3.2. Some special types of invariant geodesic laminations	36
3.3. Accordions of invariant geodesic laminations	44
3.4. Smart criticality	55
3.5. Linked quadratically critical invariant geodesic laminations	61
3.6. Invariant geodesic laminations generated by laminational equivalence relations	63
Chapter 4. Applications: Spaces of topological polynomials	79
4.1. The local structure of the space of all simple dendritic polynomials	79
4.2. Two-dimensional spaces of σ_d -invariant geodesic laminations	82
Bibliography	99
