

Contents

Chapter 1. Introduction	1
1.1. Statement of the result	1
1.2. Relation to other works	4
1.3. Overview of the book	5
1.4. Further remarks	6
Chapter 2. Recall of the construction of u_ν and the distorted Fourier transform	7
2.1. Summary of the properties of the solutions $u_\nu(t, x)$	7
2.2. Passage to the Fourier side	8
Chapter 3. Growth properties of the forward linear parametrix	11
Chapter 4. Setting up the perturbative problem	19
Chapter 5. Nonlinear estimates	23
Chapter 6. Outline of the iterative scheme	27
Chapter 7. Control of the first iterate; contribution of the linear terms $\mathcal{R}(\tau, \underline{x}^{(0)})$	29
Chapter 8. Control of the first iterate; contribution of the nonlinear terms	61
Chapter 9. Iterative step; a priori control of higher iterates	69
Chapter 10. Preparations for the proof of convergence; refined estimates	87
Chapter 11. Improvements upon re-iteration	91
Chapter 12. Convergence of the iterative scheme	97
Chapter 13. Proof of the main technical theorem	111
Chapter 14. Appendix	113
14.1. The contribution of the first term in (2.9) in the proof of Proposition 7.0.1	113
14.2. The contribution of the source term $\beta_\nu^2(\tau)\mathcal{K}_{cc}^2 x^{(0)}$ in the proof of Proposition 7.0.1	120
Bibliography	127
