

Contents

Chapter 1. Introduction	1
Chapter 2. Global CY-B-model and quasi-modular forms	5
Chapter 3. Global Landau-Ginzburg B-model at genus zero	11
3.1. A family of polynomials	11
3.2. The twisted de Rham cohomology	12
3.3. The Gauss-Manin connection and the higher residue pairing	13
Chapter 4. Opposite subspaces	15
4.1. Symplectic vector space and semi-infinite VHS	15
4.2. Definition and first properties	16
4.3. Homogeneous opposite subspaces over the marginal moduli	18
4.4. The complex conjugate opposite subspace	23
4.5. Opposite subspaces for Fermat polynomials	24
4.6. The Cecotti-Vafa structure	25
Chapter 5. Quantization and Fock bundle	29
5.1. Givental's quantization formalism	29
5.2. Frobenius structures	30
5.3. From an opposite subspace to a Frobenius structure	31
5.4. The total ancestor potential	33
5.5. The abstract Fock bundle	37
5.6. Abstract modular forms	43
5.7. The holomorphic anomaly equations	45
5.8. Fermat simple elliptic singularity of type $E_6^{(1,1)}$	47
Chapter 6. Mirror symmetry for orbifold Fermat CY hypersurfaces	51
6.1. Orbifold Gromov–Witten theory	51
6.2. I -function	54
6.3. Mirror symmetry for \mathcal{D} -modules	56
Chapter 7. Mirror symmetry for Fermat CY singularities	69
Appendix A. A proof of Proposition 7.0.1	79
Bibliography	89
