

Contents

Chapter 1. Introduction	1
Chapter 2. Fibered cusp surgery metrics	9
1. Fibered cusp surgery metrics	9
2. The de Rham operator of a surgery metric	12
Resolvent under degeneration	17
Chapter 3. Pseudodifferential operator calculi	19
1. Double space	19
2. Densities	22
3. Operator calculi	23
4. Mapping properties and composition	24
5. Normal operators	24
6. Compatibility	26
Chapter 4. Resolvent construction	27
Step 0: Symbolic inversion	33
Step 1: Removing the error at \mathfrak{B}_{ff}	33
Step 2: Error at $\mathfrak{B}_{\phi bf}$, preliminary step	35
Step 3: Removing the error at $\mathfrak{B}_{\phi bf}$	36
Step 4: Removing the error at \mathfrak{B}_{mf}	38
Step 5: Solution up to finite rank error	41
Step 6: Analytic Fredholm theory and the resolvent	44
Chapter 5. Projection onto the eigenspace of small eigenvalues	47
Step 7: Sharper statement concerning the meromorphic part of the resolvent	50
Heat kernel under degeneration	51
Chapter 6. Surgery heat space	53
Chapter 7. Solving the heat equation	59
1. The heat kernel of a Laplace-type operator	59
2. The trace of the heat kernel	67
3. Symmetry for even metrics	72
Torsion under degeneration	77
Chapter 8. The R -torsion on manifolds with boundary	79
Chapter 9. The intersection R -torsion of Dar and L^2 -cohomology	83

Chapter 10. Analytic torsion conventions	89
Chapter 11. Asymptotics of analytic torsion	95
Chapter 12. A Cheeger-Müller theorem for fibered cusp manifolds	101
Appendix A. Model cases: Euclidean Laplacians and Dirac operators	105
1. Mapping properties near infinity	105
2. Mapping properties near a blown-up point	108
Appendix B. Geometric microlocal preliminaries	111
1. Manifolds with corners and blow-up	111
2. b -maps and b -fibrations	111
3. Polyhomogeneous conormal functions, pull-back, and push-forward	112
Appendix C. Proof of composition formula	115
1. Triple surgery space	115
2. Properties of the projection maps	116
3. Densities and blow-up	118
4. Proof of mapping theorem	119
5. Proof of composition formula	120
Bibliography	123
