

Contents

Introduction	1
High regularity in perturbation theory	1
Ultra-differentiable functions	4
Functions C and Ω	6
An arithmetic condition for ultra-differentiable functions	8
KAM type results	10
Hamiltonian normal forms and Nekhoroshev type results	14
Chapter 1. Estimates on ultra-differentiable functions	21
1.1. Majorant series and ultra-differentiable functions	22
1.2. Properties of majorant series	23
1.3. Derivatives	24
1.4. Products	24
1.5. Compositions	26
1.6. Flows	29
1.7. Inverse functions	33
Chapter 2. Application to KAM theory	35
2.1. Statement of the KAM theorem with parameters	35
2.2. Approximation by rational vectors	37
2.3. KAM step	37
2.4. Iterations and convergence	44
2.5. Proof of Theorem A	49
2.6. Proof of Theorem F	51
2.7. Proof of Theorem B	52
Chapter 3. Application to Hamiltonian normal forms and Nekhoroshev theory	55
3.1. Periodic averaging	55
3.2. Stability in the linear case: proof of Theorem H	60
3.3. Diffusion in the linear case: proof of Theorem I	64
3.4. Stability in the non-linear case: proof of Theorem J	65
3.5. Stability in the quasi-convex case: proof of Theorem K	67
3.6. Diffusion in the quasi-convex case: proof of Theorem L	73
3.7. Stability in the steep case: proof of Theorem M	78
Appendix A. On the moderate growth condition	85
Bibliography	87
