

# Contents

Chapter 1. Introduction	1
Chapter 2. Cohomological Tensor Functors	5
2.1. The superlinear groups	5
2.2. The Duflo-Serganova functor $DS$	7
2.3. Cohomology functors	9
2.4. Support varieties and the kernel of $DS$	11
2.5. The tensor functor $D$	12
2.6. The relation between $DS(V)$ and $D(V)$	15
2.7. Hodge decomposition	18
2.8. The case $m > 1$	20
2.9. Boundary maps	24
2.10. Highest weight modules	25
2.11. The Casimir	29
Chapter 3. The Main Theorem and its Proof	31
3.1. The language of Brundan and Stroppel	31
3.2. On segments, sectors and plots	33
3.3. Mixed tensors and ground states	36
3.4. Sign normalizations	40
3.5. The main theorem	42
3.6. Strategy of the proof	48
3.7. Modules of Loewy length 3	54
3.8. Inductive Control over $DS$	58
3.9. Moves	63
Chapter 4. Consequences of the Main Theorem	73
4.1. Tannaka Duals	73
4.2. Cohomology I	77
4.3. Cohomology II	78
4.4. Cohomology III	80
4.5. The forest formula	81
4.6. $I$ -module structure on the cohomology $H_{DS_n}^\bullet$	85
4.7. Primitive elements of $H_{DS_n}^\bullet(V(\mathbf{1}))$	90
4.8. Kac module of $\mathbf{1}$	93
4.9. Strict morphisms	95
4.10. The module $R((n)^n)$	97
4.11. The basic hook representations $S$	99
Bibliography	105
