Introduction	vii
Chapter 1. Normal surface singularities, resolutions, and intersection theory	1
1.1. The intersection theory of good resolutions	2
1.2. Log resolutions and divisors	5
Chapter 2. Normal surface singularities and their valuation spaces	7
2.1. Classification of finite semivaluations	8
2.2. Dual divisors associated to valuations and b-divisors	9
2.3. Intersection theory and skewness	11
2.4. Weak topology and tangent vectors	16
2.5. Dual graphs and the structure of \mathcal{V}_X	17
2.6. Partial order, trees, and parameterizations	19
2.7. The angular metric	23
Chapter 3. Log discrepancy, essential skeleta, and special singularities	27
3.1. Log canonical and log terminal singularities	28
3.2. The essential skeleton	29
Chapter 4. Dynamics on valuation spaces	33
4.1. Induced maps on valuation spaces	33
4.2. Action on dual divisors	37
4.3. Action on b-divisors	39
4.4. Angular distance is non-increasing	42
4.5. The Jacobian formula	44
4.6. Critical skeleton	47
4.7. Classification of valuative dynamics	49
Chapter 5. Dynamics of non-finite germs	51
5.1. Construction of an eigenvaluation	51
5.2. Weak convergence	53
5.3. Semi-superattracting germs	55
5.4. Strong convergence	56
Chapter 6. Dynamics of non-invertible finite germs	59
6.1. Quotient singularities	59
6.2. Non-lt singularities	59
6.3. Irrational rotations on cusp singularities	61
Chapter 7. Algebraic stability	63
7.1. Existence of geometrically stable models	64

7.2. Smoothness of geometrically stable models	67
Chapter 8. Attraction rates	71
8.1. First dynamical degree	71
8.2. Recursion relations for the sequence of attraction rates	72
8.3. Finite germs on cusp singularities	74
Chapter 9. Examples and remarks	77
9.1. A finite map at a smooth point	77
9.2. A non-finite map at a smooth point	79
9.3. A quotient singularity	80
9.4. A simple elliptic singularity	81
9.5. Quasihomogeneous singularities	81
9.6. A non-finite map on a cusp singularity	82
9.7. A finite map on a cusp singularity	84
9.8. Different normalizations	86
9.9. Automorphisms	87
9.10. Positive characteristic	87
Appendix A. Cusp singularities	91
A.1. Arithmetic construction of cusp singularities	91
A.2. Finite endomorphisms	92
Bibliography	95
