

# Contents

|   |    |
|---|----|
| Chapter 1. Introduction   | 7  |
| 1. Historical background  | 7  |
| 2. Charge transfer model and main results   | 10 |
| 3. Main ideas   | 14 |
| Notation  | 17 |
| Organization  | 17 |
| Acknowledgment  | 17 |
| Chapter 2. Preliminaries  | 19 |
| 1. Strichartz estimates and local energy decay  | 19 |
| 2. Lorentz Transformations and Energy   | 25 |
| Chapter 3. Estimates along Slanted Lines  | 29 |
| 1. Free wave equations  | 29 |
| 2. Wave equations with stationary potentials  | 30 |
| Chapter 4. Endpoint Reversed Strichartz Estimates                                       | 39 |
| 1. Bootstrap argument   | 40 |
| 2. Bound states   | 41 |
| 3. Decomposition into channels  | 46 |
| 4. Analysis of the three channels   | 47 |
| 5. Conclusion   | 54 |
| Chapter 5. Strichartz Estimates and Energy Bound  | 57 |
| Chapter 6. Inhomogeneous Estimates  | 67 |
| 1. Scattering states  | 67 |
| 2. Inhomogeneous local decay estimate and Strichartz estimates                          | 69 |
| 3. Reversed endpoint Strichartz estimates with inhomogeneous terms in<br>reversed norms | 74 |
| 4. Reversed type local decay estimates  | 82 |
| Chapter 7. Scattering   | 87 |
| Bibliography  | 91 |
