

Contents

Chapter 1. Introduction	1
1.1. Flashback	1
1.2. Atemporal dynamics	1
1.3. Relating atemporal dynamics to traditional dynamics	2
1.4. Computational questions	3
1.5. The torsion group of a nonhalting abelian network	4
1.6. Critical networks	4
1.7. Example: Rotor networks and abelian mobile agents	5
1.8. Proof ideas	6
1.9. Summary of notation	6
Chapter 2. Commutative Monoid Actions	9
2.1. Injective actions and Grothendieck group	9
2.2. The case of finite commutative monoids	11
Chapter 3. Review of Abelian Networks	13
3.1. Definition of abelian networks	13
3.2. Legal and complete executions	15
3.3. Locally recurrent states	15
3.4. The production matrix	16
3.5. Subcritical, critical, and supercritical abelian networks	17
3.6. Examples: sandpiles, rotor-routing, toppling, etc	19
Chapter 4. The Torsion Group of an Abelian Network	29
4.1. The removal lemma	29
4.2. Recurrent components	31
4.3. Construction of the torsion group	38
4.4. Relations to the critical group in the halting case	41
Chapter 5. Critical Networks: Recurrence	45
5.1. Recurrent configurations and the burning test	45
5.2. Thief networks of a critical network	48
5.3. The capacity and the level of a configuration	53
5.4. Stoppable levels: When does the torsion group act transitively?	56
Chapter 6. Critical Networks: Dynamics	63
6.1. Activity as a component invariant	63
6.2. Near uniqueness of legal executions	69
Chapter 7. Rotor and Agent Networks	73
7.1. The cycle test for recurrence	75

7.2. Counting recurrent components	78
7.3. Determinantal generating functions for recurrent configurations	79
Chapter 8. Concluding Remarks	83
8.1. A unified notion of recurrence and burning test	83
8.2. Forbidden subconfiguration test for recurrence	83
8.3. Number of recurrent configurations in a recurrent component	84
Acknowledgement	85
Bibliography	87
