

# Contents

Chapter 1. Introduction	1
1.1. Previously Known Partial Results	2
1.2. Main Results	3
1.3. Spectral Interpretation via the Hilbert–Brunn–Minkowski operator	5
1.4. Method of Proof	6
1.5. Applications	6
Chapter 2. Notation	9
Chapter 3. Global vs. Local Formulations of the $L^p$ -Brunn–Minkowski Conjecture	11
3.1. Standard Equivalent Global Formulations	11
3.2. Global vs. Local $L^p$ -Brunn–Minkowski	12
Chapter 4. Local $L^p$ -Brunn–Minkowski Conjecture – Infinitesimal Formulation	17
4.1. Mixed Surface Area and Volume of $C^2$ functions	17
4.2. Properties of Mixed Surface Area and Volume	18
4.3. Second $L^p$ -Minkowski Inequality	20
4.4. Comparison with classical $p = 1$ case	21
4.5. Infinitesimal Formulation On $S^{n-1}$	21
4.6. Infinitesimal Formulation On $\partial K$	22
Chapter 5. Relation to Hilbert–Brunn–Minkowski Operator and Linear Equivariance	25
5.1. Hilbert–Brunn–Minkowski operator	26
5.2. Linear equivariance of the Hilbert–Brunn–Minkowski operator	30
5.3. Spectral Minimization Problem and Potential Extremizers	33
Chapter 6. Obtaining Estimates via the Reilly Formula	37
6.1. A sufficient condition for confirming the local $p$ -BM inequality	38
6.2. General Estimate on $D(K)$	40
6.3. Examples	41
Chapter 7. The second Steklov operator and $B_H(B_2^n)$	45
7.1. Second Steklov operator	45
7.2. Computing $B_H(B_2^n)$	46
Chapter 8. Unconditional Convex Bodies and the Cube	49
8.1. Unconditional Convex Bodies	49
8.2. The Cube	50

Chapter 9. Local log-Brunn–Minkowski via the Reilly Formula	53
9.1. Sufficient condition for verifying local log-Brunn–Minkowski	53
9.2. An alternative derivation via estimating $B_H(K)$	55
Chapter 10. Continuity of $B_H, B, D$ with application to $B_q^n$	57
10.1. Continuity of $B_H, B, D$ in $C$ -topology	57
10.2. The Cube	58
10.3. Unit-balls of $\ell_q^n$	60
Chapter 11. Local Uniqueness for Even $L^p$ -Minkowski Problem	61
Chapter 12. Stability Estimates for Brunn–Minkowski and Isoperimetric Inequalities	65
12.1. New stability estimates for origin-symmetric convex bodies with respect to variance	65
12.2. Improved stability estimates for all convex bodies with respect to asymmetry	70
Bibliography	75
