

Contents

Chapter 1. Introduction	1
1.1. The type II blow up solutions of [33], [32]	2
1.2. The effect of symmetries on the solutions of Theorem 1.1	3
1.3. Conditional stability of type II solutions	4
1.4. Spectral theory associated with the linearisation \mathcal{L}	6
1.5. Description of the data perturbation in terms of the distorted Fourier transform	9
1.6. Outline of the main result from [26]	11
1.7. Figures	12
Chapter 2. The main theorem and outline of the proof	15
2.1. The main theorem	15
2.2. Outline of the proof	16
Chapter 3. Construction of a two parameter family of approximate blow up solutions	21
3.1. Step 0: the bulk term	25
3.2. Step 1: choice of the first correction v_1	25
3.3. Step 2: the e_1 error	26
3.4. Step 3: choice of second correction v_2	26
3.5. Step 4: the e_2 error	27
3.6. Step 5: inductive step	28
3.7. Step 6: choice of $v_{smooth,a}$, $a = 1, 2$	29
Chapter 4. Modulation theory; determination of the parameters $\gamma_{1,2}$.	33
4.1. Re-scalings and the distorted Fourier transform	33
4.2. The effect of scaling the bulk part	34
Chapter 5. Iterative construction of blow up solution almost matching the perturbed initial data	43
5.1. Formulation of the perturbation problem on Fourier side	43
5.2. The proof of Theorem 5.1	45
5.3. Translation to original coordinate system	64
Chapter 6. Proof of Theorem 2.1	67
Chapter 7. Outlook	69
Bibliography	71
Index	75
