

# Contents

Chapter 1. Introduction	1
1.1. A review of the state of the art	3
1.2. The general heterogeneous case: Setting of the problem	6
1.3. The link between traveling waves and spreading properties	7
Chapter 2. A general formula for the expansion sets	9
2.1. Notations and hypotheses	9
2.2. The main tool: Generalized principal eigenvalues	10
2.3. Statement of the results in dimension 1	11
2.4. Statement of the results in dimension $N$	12
2.5. Geometry of the expansion sets	14
Chapter 3. Exact asymptotic spreading speed in different frameworks	17
3.1. Homogeneous, periodic and homogeneous at infinity coefficients	17
3.2. Recurrent media	17
3.3. Almost periodic media	19
3.4. Asymptotically almost periodic media	20
3.5. Uniquely ergodic media	20
3.6. Radially periodic media	22
3.7. Spatially independent media	22
3.8. Space periodic and time-heterogeneous media	23
3.9. Directionally homogeneous media	24
3.10. A non-convex expansion set	26
3.11. An alternative definition of the expansion set and applications to random and slowly varying media	27
Chapter 4. Properties of the generalized principal eigenvalues	31
4.1. Earlier notions of generalized principal eigenvalues	31
4.2. Comparison between the generalized principal eigenvalues	33
4.3. Continuity with respect to the coefficients and properties of the Hamiltonians	34
4.4. Comparisons with earlier notions of eigenvalues	36
Chapter 5. Proof of the spreading property	41
5.1. The connection between asymptotic spreading and homogenization	41
5.2. The WKB change of variables	44
5.3. The equations on $Z_*$ and $Z^*$	47
5.4. Estimates on $Z_*$ and $Z^*$ through some integral minimization problem	50
5.5. Conclusion of the proof of Theorem 2.2	57
5.6. The recurrent case	57

5.7. Geometry of the expansion sets	58
Chapter 6. The homogeneous, periodic and compactly supported cases	63
Chapter 7. The almost periodic case	65
Chapter 8. The uniquely ergodic case	67
Chapter 9. The radially periodic case	69
Chapter 10. The space-independent case	71
10.1. Computation of the generalized principal eigenvalues in the space-independent case	71
10.2. Computation of the speeds in the space-independent case	73
Chapter 11. The directionally homogeneous case	75
Chapter 12. Proof of the spreading property with the alternative definition of the expansion sets and applications	85
Chapter 13. Further examples and other open problems	89
13.1. An example of recurrent media which does not admit an exact spreading speed	89
13.2. A time-heterogeneous example where our construction is not optimal	91
13.3. A multi-dimensional example where our construction is not optimal	91
Bibliography	95
