Acknowledgments	vii
Chapter 1. Introduction	1
1.1. Overview	1
1.2. Organization and the main results	2
Chapter 2. Preliminaries for the complex and finite field settings	7
2.1. Gamma and beta functions	7
2.2. Gauss and Jacobi sums	10
2.3. Lagrange inversion	13
2.4. A dictionary between the complex and finite field settings	14
Chapter 3. Classical hypergeometric functions	15
3.1. Classical development	15
3.2. Some properties of hypergeometric functions with $n = 1$	16
Chapter 4. Finite field analogues	25
4.1. Periods in the finite field setting	25
4.2. Hypergeometric varieties	26
4.3. Hypergeometric functions over finite fields	27
4.4. Comparison with other finite field hypergeometric functions	28
Chapter 5. Some related topics on Galois representations	31
5.1. Absolute Galois groups and Galois representations	31
5.2. Größencharacters in the sense of Hecke	33
5.3. Notation for the N th power residue symbol	34
5.4. Jacobi sums and Größencharacters	36
Chapter 6. Galois representation interpretation	39
6.1. Galois interpretation for ${}_1\mathbb{P}_0$	39
6.2. Generalized Legendre curves and their Jacobians	40
6.3. Galois interpretation for ${}_2\mathbb{P}_1$	44
6.4. Some special cases of ${}_2\mathbb{P}_1$ -functions	47
6.5. Galois interpretation for ${}_{n+1}\mathbb{F}_n$	48
6.6. Zeta functions and hypergeometric functions over finite fields	49
6.7. Summary	50
Chapter 7. A finite field Clausen formula and an application	53
7.1. A finite field version of the Clausen formula by Evans and Greene	53
7.2. Analogues of Ramanujan type formulas for $1/\pi$	55
Chapter 8. Translation of some classical results	59

8.1. Kummer's 24 Relations	59
8.2. A Pfaff-Saalschütz evaluation formula	63
8.3. A few analogues of algebraic hypergeometric formulas	64
Chapter 9. Quadratic or higher transformation formulas	69
9.1. Some results related to elliptic curves	69
9.2. A Kummer quadratic transformation formula	71
9.3. The quadratic formula in connection with the Kummer relations	79
9.4. A finite field analogue of a theorem of Andrews and Stanton	84
9.5. Another application of Bailey cubic transformations	91
9.6. Another cubic ${}_2F_1$ formula and a corollary	93
Chapter 10. An application to hypergeometric abelian varieties	101
Chapter 11. Open questions and concluding remarks	105
11.1. Numeric observations	105
Chapter 12. Appendix	109
12.1. Bailey ${}_3F_2$ cubic transforms	109
12.2. A proof of a formula by Gessel and Stanton	110
Bibliography	113
Index	119
