

Contents

Chapter 1. Introduction	1
Chapter 2. Anchored planar algebras	5
2.1. Planar algebras	5
2.2. Anchored planar algebras	7
2.3. Generators for the anchored planar operad	10
Chapter 3. The main theorem and examples	13
3.1. Module tensor categories	13
3.2. The main theorem	16
3.2.1. Generalisations	16
3.3. Examples	18
3.3.1. Near group categories	18
3.3.2. Temperley-Lieb-Jones module categories	19
Chapter 4. Constructing anchored planar algebras	25
4.1. Generic tangles and tangles in standard form	26
4.2. The ribbon braid group	30
4.3. Assigning maps to generic tangles	32
4.4. Proof of Theorem 4.1	35
4.5. Induction along a lax functor	39
Chapter 5. Anchored planar algebras from module tensor categories	41
5.1. Diagram cheat sheet from [HPT16]	41
5.2. Constructing the anchored planar algebra	45
5.3. Functoriality	47
Chapter 6. Module tensor categories from anchored planar algebras	53
6.1. Reconstructing the category \mathcal{M}	53
6.2. The adjoint pair $\Phi \dashv \text{Tr}_C$	55
6.3. The tensor structure on \mathcal{M}	58
6.4. The pivotal structure	62
6.5. The central functor	64
6.6. Functoriality	66
Chapter 7. Equivalence of categories	69
7.1. Module tensor categories to planar algebras and back	69
7.2. Naturality of Ψ	76
7.3. Planar algebras to module tensor categories and back	78
Appendix A. An associativity type relation	83

Appendix B. Anchored planar tangles with coupons	85
Appendix C. The tube string calculus for the categorified trace	89
Bibliography	99
