Acknowledgments	vii
Chapter 1. Introduction	1
1.1. Motivations	1
1.2. Overview of Main Results	2
Chapter 2. Background Material	7
2.1. The Sheaves of Principal Parts	7
2.2. Families of Curves and Their Inflection Points	9
2.3. The Sheaves of Invincible Parts	11
Chapter 3. Defining Automatic Degeneracy	15
3.1. The Definition	15
3.2. Application to Counting Limiting Inflection Points	17
3.3. Relationship to Well-Known Invariants and Multiplicities	19
Chapter 4. Automatic Degeneracies of a Node	25
4.1. Finding a Basis of $\mathbb{P}^m(xy)^\vee$	26
4.2. The Weight-2 Case	28
4.3. The Weight-1 Case	33
4.4. Flecnodes as Limits of Inflection Points	34
Chapter 5. Automatic Degeneracies of Higher-Order Singularities	37
5.1. The Case of Cusps	37
5.2. An Algorithm for Finding a Basis of $\mathbb{P}^m(f)^\vee$	39
5.3. Bounds on Automatic Degeneracies	47
Chapter 6. Examples of Computing Automatic Degeneracies	53
6.1. Conditions for Automatic Degeneracies to be Zero	53
6.2. An Explicit Basis of $\mathbb{S}\mathbb{P}^m(f)^\vee$ for $1 \leq m \leq 4$	54
6.3. Computation of $\text{AD}_{(1,1)}^2(f)$	54
6.4. Computation of $\text{AD}_{(2)}^3(y^t - x^s)$	55
6.5. Computation of $\text{AD}_{(1)}^2(y^t - x^s)$	60
6.6. Computation of $\text{AD}_{(2)}^4(y^2 - x^s)$	65
6.7. Computation of $\text{AD}_{(1)}^3(y^2 - x^s)$	67
6.8. Expected Values of Various Planar Automatic Degeneracies	69
6.9. An Example in the Non-Planar Case	73
Chapter 7. Other Enumerative Applications	81
7.1. Counting Hyperflexes in a Pencil of Plane Curves	81

7.2. Counting Septactic Points in a Pencil of Plane Curves	85
7.3. Calculating Classes of Weierstrass Divisors	87
Appendix A. Summary of Open Problems	95
Bibliography	97
