Acknowledgments	vii
Chapter 1. Introduction	1
Chapter 2. Path encodings of the BBS	17
2.1. Initial configuration of the one-sided BBS	17
2.2. Carrier process for the one-sided BBS	17
2.3. Action of the carrier for the one-sided BBS	19
2.4. Extension to the two-sided BBS	19
2.5. Defining the carrier process and dynamics uniquely	21
2.6. Inverse of the action of the carrier	25
2.7. Invariant set of initial conditions	30
2.8. Correspondence between particle configuration and current	35
Chapter 3. Random initial configurations	43
3.1. Invariance in distribution and ergodicity for random particle configurations	44
3.2. Examples of invariant initial configurations	50
3.2.1. Independent and identically distributed initial configuration	51
3.2.2. Markov initial configuration	52
3.2.3. Conditioning the i.i.d. configuration to have bounded solitons	53
3.2.4. Proof of Theorem 1.9	62
3.3. Particle current and ergodicity for example invariant configurations	62
3.3.1. I.i.d. initial configuration	63
3.3.2. I.i.d. initial configuration conditioned to have bounded solitons	64
3.3.3. Markov initial condition	68
3.4. Distance travelled by tagged particle for i.i.d. initial configuration	73
Chapter 4. Connections with Pitman's theorem and exclusion processes	81
4.1. One-sided random initial configurations and Pitman's theorem	81
4.2. BBS versus totally asymmetric simple exclusion processes	82
Chapter 5. BBS on \mathbb{R}	85
5.1. Operator T for continuous functions	85
5.2. Reversible set and invariant set	85
5.3. Invariance in distribution	90
5.4. Brownian motion with drift	91
5.4.1. Proof of Theorem 5.9 via simple random walk scaling limit	91
5.4.2. Proof of Theorem 5.9 via Theorem 5.7	93
Chapter 6. Open questions	95
Bibliography	97
