

Contents

Chapter 1. Introduction	1
1.1. Geigle-Lenzing complete intersections and projective spaces	1
1.2. Our results on Geigle-Lenzing complete intersections	3
1.3. Our results on Geigle-Lenzing projective spaces	6
Chapter 2. Preliminaries	11
2.1. Triangulated categories and tilting theory	11
2.2. Higher dimensional Auslander-Reiten theory	14
Part 1. Geigle-Lenzing complete intersections	19
Chapter 3. Geigle-Lenzing complete intersections	21
3.1. The definition and basic properties	21
3.2. R is \mathbb{L} -factorial and has \mathbb{L} -isolated singularities	27
3.3. Tate's DG algebra resolutions	34
3.4. I -canonical algebras	37
Chapter 4. Cohen-Macaulay representations on Geigle-Lenzing complete intersections	41
4.1. Basic properties of $\mathrm{CM}^{\mathbb{L}} R$	41
4.2. Tilting theory in the stable categories of Cohen-Macaulay modules	47
4.3. CM-canonical algebras and d -tilting objects	52
4.4. Cohen-Macaulay finiteness and d -Cohen-Macaulay finiteness	60
4.5. Matrix factorizations and their tensor products	70
4.6. The tilting object via tensor products	76
Part 2. Geigle-Lenzing projective spaces	81
Chapter 5. Geigle-Lenzing projective spaces	83
5.1. Basic properties	83
5.2. Vector bundles	87
5.3. Appendix: Proof of Auslander-Reiten-Serre duality	94
Chapter 6. d -canonical algebras	97
6.1. Basic properties	97
6.2. Orlov-type semiorthogonal decompositions	104
6.3. Coxeter polynomials	108
Chapter 7. Tilting theory on Geigle-Lenzing projective spaces	115
7.1. Basic properties of tilting sheaves	115
7.2. Tilting-cluster tilting correspondence	119

7.3. d -tilting bundles on \mathbb{X}	124
7.4. Examples	133
Bibliography	137
