

Contents

Chapter 1. Introduction	1
Chapter 2. Background Material on Wave Trains	9
2.1. Spectra of wave trains in the co-moving frame	10
2.2. The nonlinear dispersion relation	11
2.3. Floquet spectra of wave trains in the laboratory frame	11
2.4. Relative Morse indices and spatial eigenvalues	13
2.5. Transverse stability of wave trains	15
Chapter 3. Main Results	17
3.1. Archimedean spiral waves	17
3.2. Fredholm properties of the linearization at spiral waves	18
3.3. Asymptotics and robustness of spiral waves	21
3.4. Far-field expansions of eigenfunctions	23
3.5. Persistence of spiral waves on large disks	23
3.6. Spectra of spiral waves restricted to large disks	25
3.7. Spectra of truncated spiral waves	27
3.8. Transverse instability of spiral waves	28
Chapter 4. Wave Trains	31
4.1. Proofs of Proposition 2.1 and Lemma 2.12	31
4.2. Proofs of Lemmas 2.3 and 2.8	32
4.3. Comparison of PDE and spatial-dynamics linearizations	34
4.4. The relative Morse index	34
Chapter 5. Exponential Dichotomies	37
5.1. Exponential dichotomies in the core region	38
5.2. Exponential dichotomies in the far field	40
5.3. Comparing core and far-field dichotomies	47
5.4. Exponential dichotomies for the adjoint equation	48
5.5. Exponential dichotomies in exponentially weighted spaces	51
5.6. Exponential trichotomies	51
Chapter 6. Fredholm Properties	55
6.1. Fredholm and Morse indices revisited	55
6.2. Exponential dichotomies imply Fredholm properties	57
6.3. Proof of Proposition 3.8	60
Chapter 7. Robustness and Asymptotics of Spiral Waves	61
Chapter 8. Shape of Eigenfunctions, and Transverse Instabilities	71

8.1. Proof of Proposition 3.17	71
8.2. Proof of Lemma 3.27	74
Chapter 9. Spiral Waves on Large Finite Disks	75
9.1. Boundary sinks	75
9.2. Construction of core, far-field and boundary-layer solutions	77
9.3. Matching of core, far-field, and boundary-layer solutions	82
Chapter 10. Spectra of Spiral Waves Restricted to Large Finite Disks	85
10.1. Excluding eigenvalues outside of the limiting spectral set	85
10.2. Convergence of eigenvalues to the boundary and the extended point spectrum	86
10.3. Accumulation near the absolute spectrum	87
Chapter 11. Spectra of Truncated Spiral Waves	97
11.1. Geometry of the linearization at boundary sinks	97
11.2. Eigenvalues and resolvent outside of the absolute spectrum	98
11.3. Accumulation of eigenvalues onto the absolute spectrum	99
Chapter 12. Applications to Spiral-Wave Dynamics and Discussion	101
12.1. Rigid rotation, truncation, and continuation	101
12.2. Instabilities of spiral waves	109
12.3. Open problems	112
Appendix A. Numerical Computation of Spiral Waves in Model Systems	115
A.1. Model systems	115
A.2. Methods	116
Acknowledgment	118
Bibliography	119
Index	125
