

Contents

Chapter 1. Introduction	1
1.1. General introduction	1
1.2. Upper-semicontinuity of metric entropy	2
1.3. Absolutely continuous invariant probability measures	3
1.4. Equilibrium states	4
1.5. Applications to the quadratic family	7
1.6. Piecewise-monotone families and upper-semicontinuity of metric entropy	9
1.7. Almost upper-semicontinuity of free energy	11
1.8. $J(f)$ for a piecewise-monotone map f	13
1.9. Uniqueness of equilibrium states, analyticity of pressure, decay of correlations	13
1.10. Necessity of positive entropy for statistical quasistability	15
1.11. Background	16
1.12. Method and structure	19
Chapter 2. Topological structures	23
2.1. Piecewise preliminaries	23
2.2. Combinatorics in the Hofbauer extension	25
2.3. Coding convergence	31
2.4. Extension embedding	32
2.5. Dynamics of rare returns	34
Chapter 3. Measures and entropy	37
3.1. Lifts of measures	37
3.2. Spreading measures and Abramov's formula	39
Chapter 4. Light limit measures and upper-semicontinuity of metric entropy	41
Chapter 5. Non-positive Schwarzian derivative	47
Chapter 6. Almost upper-semicontinuity of the free energy	51
Chapter 7. Katok theory, pressure and exponential tails	57
7.1. Katok theory	57
7.2. Ancillary proofs	59
7.3. Thermodynamics for induced maps	61
Chapter 8. Instability for Collet-Eckmann maps	71
8.1. Preliminary lemmas	72
8.2. Acips for some almost-parabolic Misiurewicz maps	74

8.3. Conjugacies to tent maps	76
8.4. Proof of Theorem 1.32	78
Chapter 9. Positive entropy does not imply statistical stability	81
9.1. Quadratic maps which nearly have a fixed point	81
9.2. Proof of Theorem 1.3	83
Bibliography	95
Definitions	101
Index	103
