<b>Part 1. Algorithms</b>	1
Chapter 1. Introduction	3
1.1. Algorithms	4
1.2. Diophantine problems related to Mordell equations	10
1.3. Organization of the paper	16
Chapter 2. The Shimura–Taniyama conjecture	19
Chapter 3. Algorithms for S-unit equations	21
3.1. Algorithm via modular symbols	22
3.2. Algorithm via height bounds	24
3.3. Comparison of algorithms	36
Chapter 4. Algorithms for Mordell equations	37
4.1. Algorithm via modular symbols	38
4.2. Algorithm via height bounds	39
4.3. Comparison of algorithms	53
Chapter 5. Algorithms for Thue and Thue–Mahler equations	55
5.1. Preliminary constructions	55
5.2. Algorithms via modular symbols	57
5.3. Algorithms via height bounds	57
5.4. Comparison of algorithms	62
Chapter 6. Algorithms for generalized Ramanujan–Nagell equations	65
6.1. Algorithm via modular symbols	65
6.2. Algorithm via height bounds	66
6.3. Comparison of algorithms	70
<b>Part 2. Height bounds</b>	71
Chapter 7. Mordell equations and almost primitive solutions	73
7.1. The difference of perfect squares and perfect cubes	74
Chapter 8. Height bounds for Thue and Thue–Mahler equations	77
8.1. Reduction to Mordell equations	77
8.2. Optimized height bounds	80
Chapter 9. Height bounds for Ramanujan–Nagell equations	83
Chapter 10. Height bounds for Mordell and S-unit equations	85

10.1.	Simplified versions	85
10.2.	Notation	86
10.3.	Mordell equation	86
10.4.	S-unit equations	90
10.5.	Optimized height bounds and height conductor inequalities	92
<b>Part 3.</b>	<b>Elliptic logarithm sieve</b>	<b>99</b>
Chapter 11.	The elliptic logarithm sieve	101
11.1.	Introduction	101
11.2.	Heights	105
11.3.	Archimedean sieve	107
11.4.	Non-archimedean sieve	111
11.5.	Height-logarithm sieve	114
11.6.	Refined enumeration	117
11.7.	Refined sieve	118
11.8.	Global sieve	122
11.9.	Elliptic logarithm sieve	124
11.10.	Input data	129
11.11.	Applications	130
11.12.	Computational aspects	132
Bibliography		135
