

Contents

Chapter 1. Introduction	1
1.1. Motivation	1
1.2. Fundamental definitions	2
1.3. Main results	3
1.4. Open problems	5
1.5. Technical highlights	7
1.6. Outline	9
1.7. Notation	12
Acknowledgments	13
Chapter 2. The increasing monoid	15
2.1. The increasing monoid	15
2.2. The generators	15
2.3. Smooth actions	16
Chapter 3. Representation categories	19
3.1. The category of all \mathcal{J} -modules	19
3.2. The category of smooth \mathcal{J} -modules	19
3.3. The category of graded \mathcal{J} -modules	20
3.4. Coinvariants	21
3.5. OI -modules	22
3.6. Semi-simplicial vector spaces	22
3.7. Shuffle algebras	23
Chapter 4. Monomial modules	25
4.1. Monomial modules	25
4.2. Principal modules	25
4.3. Simple modules	26
4.4. Standard modules	27
Chapter 5. Gröbner theory	29
5.1. Principal modules	29
5.2. Graded modules	30
Chapter 6. Concatenation, shift, and transpose	33
6.1. The concatenation product	33
6.2. The shift functor	34
6.3. The transpose functor	35
Chapter 7. Finite length modules	37
7.1. Classification of simples	37

7.2. Some Ext computations	38
7.3. Invariants and coinvariants	39
7.4. The canonical grading	40
Chapter 8. Multiplicities	43
8.1. Definitions and simple results	43
8.2. The multiplicity one theorem	44
8.3. Truncations	45
8.4. Some applications	47
Chapter 9. The smooth category as a Serre quotient of the graded category	49
9.1. The functors Ψ and Γ	49
9.2. Computing Ψ and Γ	50
9.3. Some Γ -acyclic modules	52
Chapter 10. Completions	55
10.1. The completion functor	55
10.2. Computing completion	56
10.3. Two variants of completion	61
10.4. Some applications of completion	62
10.5. The right adjoint of Φ	64
Chapter 11. The theorem on level	65
11.1. Level	65
11.2. Saturation	66
11.3. Concatenation with a simple	68
11.4. The main theorem	68
11.5. Some consequences of the main theorem	69
Chapter 12. Grothendieck groups, Hilbert series, and Krull dimension	73
12.1. Grothendieck groups	73
12.2. Hilbert series	76
12.3. Krull dimension	77
Chapter 13. Induction and coinduction	79
13.1. Coinduction	79
13.2. Splitting coinduction	81
13.3. Indecomposability of coinduction	82
13.4. Induction	83
13.5. Explanation of definitions	83
Chapter 14. Injective modules	85
14.1. Finite length injectives	85
14.2. Classification of injectives	86
14.3. Injective resolutions	87
Chapter 15. Local cohomology and saturation	89
15.1. Generalities	89
15.2. The case of \mathcal{J} -modules	91
15.3. Semistandard modules	92
15.4. Semi-orthogonal decompositions	94

Chapter 16. Structure of level categories	97
16.1. Multigraded \mathcal{J}^r -modules	97
16.2. The functor Ω	99
16.3. The main theorem	100
Chapter 17. Koszul duality	103
17.1. Notation and conventions	103
17.2. Tor and minimal resolutions	103
17.3. The Koszul complex	103
17.4. The duality functor	106
17.5. Duality and the concatenation product	112
17.6. The finiteness theorem	114
17.7. Betti tables	114
17.8. Conceptual explanation of \mathcal{K} and \mathcal{D}	115
Chapter 18. Grothendieck groups revisited	117
18.1. The pairing on $K(\mathcal{J})$	117
18.2. Higher multiplicities	117
18.3. The non-commutative Hilbert series	118
18.4. Another non-commutative series	120
18.5. Effectivity	121
Appendix A. Categorical background	123
A.1. Multiplicities	123
A.2. Derived functors and limits and colimits	124
A.3. Localizing subcategories	125
A.4. Defining functors on projectives	126
A.5. An acyclicity criterion	127
A.6. An equivalence criterion	129
A.7. Exact sequences of functors	131
A.8. Injectives	132
Bibliography	133
