Chapter 1. Introduction	1
1.1. The classical McShane identity	1
1.2. McShane identity for bordered hyperbolic surfaces	2
1.3. Labourie–McShane’s identity for Hitchin representations	2
1.4. Positive representations	3
1.5. McShane identities for convex real projective 1-cusped tori	4
1.6. McShane identities for general convex real projective surfaces	5
1.7. McShane identities of loxodromic bordered positive representations	7
1.8. Birman–Series theorem and McShane-type inequalities for $n \geq 4$ unipotent bordered representations	7
1.9. Triple ratio boundedness and rigidity	8
1.10. Applications of the McShane identity	10
1.11. Applications to Thurston-type metrics	11
1.12. Section overview and reading guide	12
Acknowledgements	14
Funding	14
Chapter 2. Preliminary	15
2.1. Positive representations	15
2.2. Representation varieties	17
2.3. Configuration space and projective invariants	18
2.4. Fock–Goncharov moduli spaces $\mathcal{X}_{\mathrm{PGL}_n, S_g, m}$ and $\mathcal{A}_{\mathrm{SL}_n, S_g, m}$	21
2.5. Fock–Goncharov $\mathcal{A}$ -coordinates	23
2.6. Fock–Goncharov $\mathcal{X}$ -coordinates	25
2.7. Positivity for $\mathcal{X}$ and $\mathcal{A}$ -moduli spaces	25
Chapter 3. Properties of projective invariants	29
3.1. Uniform boundedness of the triple ratio	29
3.2. $n$ -Fuchsian rigidity conditions	32
Chapter 4. Goncharov–Shen potentials	37
4.1. Goncharov–Shen potentials	37
4.2. Constructing Goncharov–Shen potentials	39
4.3. Goncharov–Shen potential and $\mathcal{A}$ -coordinates	41
Chapter 5. Identities for $\mathrm{PGL}_3(\mathbb{R})$ -representations with unipotent boundary	43
5.1. Structure of proof in the classical case	43
5.2. Generalizing step 1: a probabilistic partition of geodesics.	46
5.3. Generalizing step 2: indexing the gap intervals	48
5.4. Generalizing step 3: McShane identity for the $S_{1,1}$ case	50

5.5. Generalizing step 3: McShane identity for series over pairs of half-pants	57
5.6. Generalizing step 3: McShane identity for series over pairs of pants	58
Chapter 6. Simple geodesic sparsity for convex real projective surfaces	61
6.1. Convex real projective surfaces	61
6.2. The geometry of convex real projective surfaces	62
6.3. Hölder regularity and convexity of $\partial\Omega$	63
6.4. Geodesic Sparsity for finite-area convex real projective surfaces	65
6.5. Polynomial growth of the number of $k$ -diagrams	67
6.6. Topological versus geometric length	67
6.7. Geodesic sparsity: area 0	69
6.8. Geodesic sparsity: Hausdorff dimension 1	71
Chapter 7. McShane identities for higher Teichmüller space	73
7.1. Labourie–McShane identities	73
7.2. Ordered ratios and identities	74
7.3. $i$ -th potential ratio	77
7.4. McShane identities for $i$ -th potential ratio	82
7.5. McShane-type inequalities for unipotent-bordered positive representations	88
7.6. A strategy for establishing the unipotent-bordered McShane identity	92
Chapter 8. Applications	95
8.1. Simple spectral discreteness	95
8.2. The collar lemma	97
8.3. Thurston-type ratio metrics	102
Appendix A. Fuchsian rigidity	109
Appendix B. More on the length spectrum of cusped strictly convex real projective surfaces	111
Bibliography	113
