Part 1. Infinite Lamination Subgroups	1
Chapter 1. Introduction	3
Chapter 2. Background material	11
2.1. $H_b^2(G; \mathbb{R})$ and WWPDP methods	11
2.2. Basic concepts of $\text{Out}(F_n)$	15
2.3. A uniform splitting lemma	20
Chapter 3. Reducing Theorem A to Theorem C and the WWPDP Construction Theorem	23
3.1. Weak attraction and subgroup decomposition theory	23
3.2. Proof that the WWPDP Construction Theorem implies Theorem B	31
3.3. Proof that Theorems B and C imply Theorem A	33
Chapter 4. Well functions and weak tiling functions	45
4.1. Well functions on intermediate conjugacy classes	45
4.2. Weak tiling functions on intermediate conjugacy classes	47
4.3. Coarse equivalence of well functions and weak tiling functions	49
4.4. Regularity properties of weak tilings	52
Chapter 5. Proof of the WWPDP Construction Theorem	55
5.1. Free splitting complex and spine of relative outer space	55
5.2. Setting up the proof	57
5.3. The case analysis	61
Part 2. Finite Lamination Subgroups	71
Chapter 6. Introduction	73
6.1. Methods of proof of Theorem C	74
Chapter 7. Lifting to an automorphism group	77
7.1. Definition of automorphic lifts	77
7.2. A sufficient condition to be abelian	79
7.3. Constructing automorphic lifts: Proof of Proposition 7.3	80
7.4. Proof that the Hyperbolic Action Theorem implies Theorem C	82
7.5. Automorphic extensions of free splitting actions	83
7.6. Hyperbolic Action Theorem, One-edge case: Proof	88
Chapter 8. Hyperbolic Action Theorem, Multi-edge case: Introduction	91
8.1. Outline of the multi-edge case	91
8.2. Motivation: Suspension actions and combination theorems	93

Chapter 9. Flaring in a top EG stratum	97
9.1. The path functions L_u and L_{PF}	98
9.2. Flaring of the path functions L_u and L_{PF}	102
9.3. Negative flaring of L_u	106
9.4. Positive flaring and other properties of L_u	107
9.5. Proof of Lemma 9.11: the Special Flaring Condition for L_u	110
9.6. Appendix: The graph homotopy principle	113
Chapter 10. Flaring in T^* and hyperbolicity of \mathcal{S}	117
10.1. The free splitting $F_n \curvearrowright T$ and its Nielsen lines	117
10.2. Path functions on \tilde{G} and T	118
10.3. Constructing T^* by coning off Nielsen axes of T	121
10.4. Geometry and dynamics on T^*	124
10.5. Proof of hyperbolicity of \mathcal{S}	131
Chapter 11. Abelian subgroups of $\text{Out}(F_n)$	135
11.1. Background review	135
11.2. Disintegration subgroups	140
Chapter 12. A train track semigroup action	145
12.1. A “homotopy semigroup action” of \mathcal{D}_+ on G	146
12.2. Semigroup actions of $\widehat{\mathcal{D}}_+$ on T and T^*	150
12.3. Dynamics of the group action $\widehat{\mathcal{D}}_0 \curvearrowright T^*$	151
Chapter 13. The suspension action	155
13.1. The suspension action $\widehat{\mathcal{D}} \curvearrowright \mathcal{S}$	155
13.2. Hyperbolic Action Theorem, Multi-edge case: Proof	157
Bibliography	167
