

Contents

Chapter 1. Introduction	1
1.1. Harmonic analysis on G	4
1.2. Main idea of the approach	7
1.3. Harmonic analysis on $\mathrm{GL}_1(F)$ associated to $\beta_\psi(\chi_s)$	8
1.4. Structure of the paper	10
Chapter 2. Local Theory of Piatetski-Shapiro and Rallis	13
2.1. Local zeta integrals of doubling method	14
2.2. Local γ -functions	17
Chapter 3. Functional Equation for $\beta_\psi(\chi_s)$	19
3.1. Zeta integrals associated to symmetric matrices	19
3.2. Zeta integrals and intertwining operators	23
3.3. Fiber integrations and functional equations	25
Chapter 4. Harmonic Analysis for $\beta_\psi(\chi_s)$	27
4.1. Behavior of both f_Φ and $f_{\widehat{\varrho \cdot \Phi}}$	27
4.2. Schwartz spaces and Fourier operator	31
4.3. Generalized function $\eta_{\mathrm{pvs}, \psi}$	33
4.4. A Paley-Wiener type theorem for $\mathcal{S}_{\mathrm{pvs}}^\pm(F^\times)$	39
Chapter 5. $\eta_{\mathrm{pvs}, \psi}$ -Fourier Transform on X_{P_Δ}	43
5.1. Fourier transform and L^2 -space on X_{P_Δ}	43
5.2. Fourier transform and Schwartz space on X_{P_Δ}	51
Chapter 6. Harmonic Analysis on $\mathbb{G}_m \times \mathrm{Sp}_{2n}$	55
6.1. Cayley transform and the Jacobian	55
6.2. Fourier operator and Schwartz space on G	60
6.3. Compatibility of $\mathcal{F}_{\rho, \psi}$ with $\mathcal{F}_{X, \psi}$ and $M_{w_\Delta}^\dagger(s, \chi, \psi)$	61
6.4. Plancherel theorem for $\mathcal{F}_{\rho, \psi}$	64
Chapter 7. Multiplicity One and Gamma Functions	71
7.1. Multiplicity one	71
7.2. Functional equation and gamma function	72
7.3. Gamma function in the sense of Gelfand and Graev	73
7.4. $\chi_s \otimes \pi$ -Fourier coefficient of $\Phi_{\rho, \psi}$	74
Chapter 8. Theorems 1.2, 1.3, and 1.4	81
8.1. Proof of Theorems 1.2 and 1.3	81
8.2. L -functions	83
8.3. Basic function	84
