

# Contents

Chapter 1. Introduction	1
1.1. Motivation	1
1.2. Main results	3
1.3. Outline	9
Chapter 2. Higher Quantum Airy Structures	13
2.1. A conceptual approach	13
2.2. A computational approach	17
2.3. Crosscapped Airy structures	23
Chapter 3. $\mathcal{W}$ algebras and Twisted Modules	25
3.1. Vertex operator algebras	25
3.2. $\mathcal{W}(\mathfrak{g})$ algebras	26
3.3. The graded Lie subalgebra property	30
3.4. Twisted modules	35
3.5. Introducing $\hbar$	37
Chapter 4. Higher Quantum Airy Structures from $\mathcal{W}$ algebras	39
4.1. The $\mathcal{W}(\mathfrak{gl}_{N+1})$ Airy structures	39
4.2. $\mathcal{W}(\mathfrak{gl}_{N+1})$ Airy structures for other automorphisms	50
4.3. The $\mathcal{W}(\mathfrak{so}_{2N})$ Airy structures	53
4.4. The exceptional types	56
Chapter 5. Higher Quantum Airy Structures from Higher Abstract Loop Equations	59
5.1. Geometry of local spectral curves	59
5.2. Bouchard–Eynard topological recursion and higher abstract loop equations	66
5.3. Local spectral curves with one component	69
5.4. Local spectral curves with several components	77
Chapter 6. $\mathcal{W}$ Constraints and Enumerative Geometry	79
6.1. $r$ -spin intersection numbers	79
6.2. Brézin–Gross–Witten theory	81
6.3. Open intersection theory	82
6.4. Fan–Jarvis–Ruan theories	85
Appendix A. Sums over Roots of Unity	87
Appendix B. Characterization of Admissible $(r, s)$	93
B.1. The values of $s$ corresponding to the intermediate subalgebras	93

B.2. Computation of $F_{0,3}$ and characterization of symmetry	95
B.3. Computation of $F_{1,1}$	99
Appendix C. Proof of Uniqueness of the Solution to the Higher Abstract Loop Equations	101
Bibliography	105
