

Contents

Chapter 1. Introduction	1
Chapter 2. Preliminaries	7
2.1. Denotations and assumptions	7
2.2. Alexander modules	7
2.3. Universal coefficient theorem	10
2.4. Cohomology Alexander modules and duality	12
2.5. Relationship with the generic fiber	15
2.6. Monodromy action on Alexander modules and finite cyclic covers	19
2.7. Differential graded algebras	23
2.8. Mixed Hodge structures and complexes	24
2.9. Real mixed Hodge complexes on smooth varieties	26
2.10. Rational mixed hodge complexes on smooth varieties	27
2.11. Limit mixed Hodge structure	29
Chapter 3. Thickened complexes	33
3.1. Thickened complex of a differential graded algebra	33
3.2. Thickened complexes and filtrations	37
3.3. Thickened complexes of sheaves of differential graded algebras	39
Chapter 4. Thickened complexes and mixed Hodge complexes	41
4.1. Denotation and assumptions	41
4.2. Thickened complexes of mixed Hodge complexes	41
Chapter 5. Mixed Hodge structures on Alexander modules	45
5.1. Denotations and assumptions	45
5.2. Local systems and thickened real de Rham complexes	45
5.3. Local systems and thickened complexes: Rational version	49
5.4. Thickened complex of the log de Rham complex	51
5.5. Dependence on the function	62
Chapter 6. The geometric map is a morphism of MHS	65
6.1. Maps between local systems	65
6.2. Proof of the theorem	70
Chapter 7. The geometric map is an MHS morphism: Consequences	77
7.1. Relationship with the cup and cap products	79
7.2. Relationship with Deligne's MHS on the generic fiber	80
7.3. Dimca-Libgober and Liu's mixed Hodge structure	82
7.4. Bounding the weights	84

Chapter 8. Semisimplicity for proper maps	89
Chapter 9. Relation to the limit MHS	93
Chapter 10. Examples and open questions	101
10.1. Hyperplane arrangements	101
10.2. Future directions and open questions	105
Bibliography	109
Index	113
