Chapter 1. Introduction and results	1
1.1. General introduction	1
1.2. Measures with nontrivial linear evolution	2
1.3. Scattering results	3
1.4. Plan of the paper	4
1.5. Notations	5
Chapter 2. The measures and linear analysis	7
2.1. Definition of the Gaussian measure $\mu_0$	7
2.2. Evolution of the Gaussian measures $\mu_q$	8
2.3. From $(NLS_p)$ to $(NLSH_p)$	11
Chapter 3. Measures and functional analysis	13
3.1. On invariant measures	13
3.2. Some functional analysis	16
3.3. Radon–Nikodym derivatives	18
Chapter 4. Evolution of the Gaussian measure	21
4.1. Hamiltonian structure of the approximate problem	21
4.2. Evolution of measures: A first result	22
Chapter 5. Nonlinear estimates	25
5.1. Strichartz estimates	25
5.2. Fractional Sobolev estimates	26
Chapter 6. Functional spaces $Y^{\rho,\epsilon}$ and $X_{t_0,\tau}^\rho$	33
6.1. Spaces for $p > 2$	34
6.2. Spaces for $\frac{3}{2} < p \leq 2$	34
6.3. Spaces for $1 < p \leq \frac{3}{2}$	35
6.4. The space $X_{t_0,\tau}^0$	35
6.5. Further properties of $Y^{\rho,\epsilon}$	35
Chapter 7. Large deviation bounds	39
7.1. Classical large deviation	39
7.2. New probabilistic smoothing effects	40
Chapter 8. The local Cauchy theory	43
Chapter 9. Global existence for $p > 1$	51
9.1. Uniform estimates	52
9.2. Passing to the limit	55

Chapter 10. Quasi-invariance of the measures	61
10.1. Passing to the limit	61
10.2. Global existence for $(NLS_p)$	64
Chapter 11. Decay estimates and scattering	65
11.1. Decay estimates	65
11.2. Almost sure scattering	67
11.3. Nonlinear evolution of measures	71
Appendix A. Some technical results	73
A.1. Action of the lens transform on Sobolev spaces	73
A.2. Some properties of the Gaussian measures $\mu_q$	74
A.3. On the Liouville theorem	82
A.4. Weighted estimates on Hermite functions	82
A.5. Proof of the embedding $\mathcal{B}_{p,q}^\rho \subset B_{p,q}^\rho$	84
Bibliography	85
