

Contents

Chapter 1. Introduction	1
Chapter 2. Simple supercuspidal representations of classical groups	11
2.1. Iwahori subgroups	11
2.2. General construction of simple supercuspidal representations	17
2.3. The case of twisted GL_{2n}	18
2.4. The case of Sp_{2n}	20
2.5. The case of SO_{2n}^μ	21
2.6. The case of SO_{2n+2}	23
2.7. The case of $\mathrm{SO}_{2n+2}^{\mathrm{ur}}$	26
Chapter 3. Characters of simple supercuspidal representations	29
3.1. The case of twisted GL_{2n}	30
3.2. The case of Sp_{2n}	33
3.3. The case of SO_{2n}^μ	34
3.4. The case of SO_{2n+2}	35
3.5. The case of $\mathrm{SO}_{2n+2}^{\mathrm{ur}}$	39
Chapter 4. Arthur's local classification theorem	43
Chapter 5. Simple supercuspidal L -packet of Sp_{2n}	51
5.1. Adjoint orbits of simple supercuspidal representations of Sp_{2n}	51
5.2. Formal degrees of simple supercuspidal representations	53
5.3. Simple supercuspidal L -packets of Sp_{2n}	56
Chapter 6. Transfer factors at affine generic elements	59
6.1. Parametrization of conjugacy classes	59
6.2. Norm correspondence	62
6.3. Choice of Whittaker data and the invariant $\eta_{\mathbf{G}}$	63
6.4. Normalized transfer factors	66
6.5. Waldspurger's formula for transfer factors	67
6.6. Affine generic data of SO_{2n}^μ	68
6.7. The case of (twisted $\mathrm{GL}_{2n}, \mathrm{SO}_{2n}^\mu$)	72
6.8. The case of $(\mathrm{Sp}_{2n}, \mathrm{SO}_{2n}^\mu)$	76
6.9. The case of $(\mathrm{SO}_{2n+2}, \mathrm{SO}_{2n}^\mu \times \mathrm{SO}_2^\mu)$	78
6.10. The case of $(\mathrm{SO}_{2n+2}^{\mathrm{ur}}, \mathrm{SO}_{2n}^\mu \times \mathrm{SO}_2^\mu)$	83
Chapter 7. Endoscopic lifting of simple supercuspidal L -packets of SO_{2n}^μ	87
7.1. Depth bound for the lifted representations of GL_{2n+1}	88
7.2. Simple supercuspidal L -packet of SO_{2n}^μ	96
7.3. Endoscopic lifting from SO_{2n}^μ to GL_{2n}	100

Chapter 8. Simple supercuspidal L -packet of SO_{2n+2} and $\mathrm{SO}_{2n+2}^{\mathrm{ur}}$	107
8.1. Construction of simple supercuspidal L -packets with $\zeta = 1$	107
8.2. Construction of simple supercuspidal L -packets with $\zeta = -1$	117
Chapter 9. Application: Formal degree conjecture for simple supercuspidal L -packets for some bad primes	119
9.1. Formal degree conjecture of Hiraga–Ichino–Ikeda	119
9.2. Outline of the proof of the formal degree conjecture	121
9.3. The case where p does not divide $2n$	123
9.4. Some wildly ramified extensions of p -adic fields	128
9.5. Some representation theory of finite Heisenberg groups	136
9.6. The second case where p divides $2n$	137
Appendix A. Kloosterman sums and Gauss sums	143
Appendix B. Depth of simple supercuspidal representations	147
B.1. Terminologies from Bruhat–Tits theory	147
B.2. Minimal positivity of depth of simple supercuspidal representations	149
Appendix C. Spinor twists for L -packets of even orthogonal groups	155
Bibliography	159
