Chapter 1. Introduction	1
1.1. Overview	1
1.2. Relations with existing literature	5
1.3. Outline	6
1.4. Notation and conventions	7
Acknowledgments	10
Chapter 2. Detailed overview and fundamental examples	11
2.1. Closed-open decompositions and recollements	12
2.2. Stratified schemes	14
2.3. Stratified noncommutative stacks	16
2.4. Fundamental operations on stratified noncommutative stacks	26
2.5. \mathcal{O} -monoidal stratifications	27
2.6. Adelic reconstruction	29
2.7. The geometric stratification of genuine G -spectra	34
2.8. Stratified topological spaces and constructible sheaves	36
2.9. Functors to a poset and naive G -spectra	39
2.10. Reflection, Möbius inversion, and Verdier duality	43
2.11. t -structures	51
2.12. Additive and localizing invariants	52
Chapter 3. Stratified noncommutative geometry	55
3.1. Posets	55
3.2. Recollements	56
3.3. Closed subcategories	57
3.4. Stratifications	59
3.5. The macrocosm reconstruction theorem	61
3.6. The microcosm and nanocosm morphisms	65
3.7. Strict objects	68
Chapter 4. Fundamental operations	71
4.1. Alignment	71
4.2. Fundamental operations on aligned subcategories	74
4.3. Gluing aligned subcategories	81
4.4. Fundamental operations on stratifications	83
Chapter 5. The \mathcal{O} -monoidal reconstruction theorem	93
5.1. Preliminaries on \mathcal{O} -monoidal ∞ -categories	93
5.2. Ideals in presentably \mathcal{O} -monoidal ∞ -categories	97
5.3. \mathcal{O} -monoidal stratifications	104

5.4.	\mathcal{O} -algebra objects in $\mathbf{LMod}_{\mathcal{I}, \text{lax}, \mathcal{B}}^{\text{f.lax}}$	107
5.5.	The \mathcal{O} -monoidal reconstruction theorem	108
5.6.	Symmetric monoidal stratifications and tensor-triangular geometry	113
Chapter 6.	The geometric stratification of genuine G -spectra	117
6.1.	The geometric stratification of genuine G -spectra	117
6.2.	The proper Tate construction	126
6.3.	Examples of reconstruction of genuine G -spectra	128
6.4.	Categorical fixedpoints via stratifications	136
Chapter 7.	The metacosm reconstruction theorem	141
7.1.	Stratifications of right-lax limits	141
7.2.	The metacosm reconstruction theorem	150
7.3.	Strict stratifications	155
Chapter 8.	Variations on the metacosm reconstruction theorem	159
8.1.	Closed, split, and thick subcategories	160
8.2.	Stratifications of stable ∞ -categories	162
8.3.	Strict morphisms among stratifications	171
8.4.	Reflection	173
Appendix A.	Actions and limits, strict and lax	187
A.1.	Strict and lax actions	188
A.2.	Strict and lax limits	195
A.3.	Lax actions and lax limits with mixed handedness	198
A.4.	Subdivisions	201
A.5.	Lax limits with mixed handedness via subdivisions	208
A.6.	An alternative description of right-lax limits of left-lax modules	210
Appendix B.	Some $(\infty, 2)$ -category theory	219
B.1.	Basic notions in $(\infty, 2)$ -category theory	219
B.2.	Fibrations	227
B.3.	Un/straightening	230
B.4.	Cartesian yoga	238
B.5.	Adjunctions	245
B.6.	Lax limits	250
Bibliography		257
