

Contents

Chapter 1. Introduction	1
1.1. The main result	1
1.2. The story when $F = \mathbf{Q}$	4
1.3. Basic objects	6
1.4. The period maps	7
1.5. Control of Hecke eigenclasses	8
1.6. The decency hypothesis	9
1.7. The eigenvariety (proving Theorem 1.7)	10
1.8. Comparison to other results	12
1.9. Organization	13
1.10. Notations	13
Acknowledgments	14
Chapter 2. Cohomology and local systems	17
2.1. Topology	17
2.2. Adelic cochains on symmetric spaces	18
2.3. Symmetric spaces for F	21
2.4. Weights and algebraic local systems	23
Chapter 3. Hilbert modular forms	25
3.1. Recollection of definitions	25
3.2. Hecke operators, Fourier expansions and newforms	28
3.3. L -functions	30
3.4. Refinements	32
Chapter 4. Algebraicity of special values	35
4.1. Archimedean Hecke operators	35
4.2. The Eichler–Shimura construction	35
4.3. Twisting	37
4.4. Evaluation classes	41
4.5. Special values of L -functions	43
Chapter 5. Locally analytic distributions and p -adic weights	47
5.1. Compact abelian p -adic Lie groups	47
5.2. Locally analytic distributions on \mathcal{O}_p	49
5.3. Actions by the monoid Δ	50
5.4. The integration map for cohomological weights	52
5.5. p -adic twisting	52
Chapter 6. The eigenvariety	57
6.1. A weight space	58

6.2.	Distribution-valued cohomology and eigenvarieties	59
6.3.	Some special points	63
6.4.	The middle-degree eigenvariety	67
6.5.	Interlude on Galois representations	71
6.6.	Smoothness at p -distinguished decent classical points	77
Chapter 7.	Period maps	85
7.1.	Analytic distributions on Γ_F	85
7.2.	Definition of period maps	86
7.3.	Compatibilities	90
7.4.	Growth properties	91
7.5.	The p -adic evaluation class	92
7.6.	Abstract interpolation	95
Chapter 8.	p -adic L -functions	101
8.1.	Consequences of smoothness	101
8.2.	p -adic L -functions	102
Appendix A.	A deformation calculation	107
A.1.	(φ, Γ) -modules and Galois representations	107
A.2.	Triangulated, semi-stable, but non-crystalline, (φ, Γ_K) -modules of rank two	110
A.3.	Weakly-refined deformations	112
Appendix B.	Decency	119
Bibliography		121
