Chapter 1. Introduction	1
1.1. Background and Motivation	1
1.2. Goals and layout	3
1.3. Notation and conventions	5
Acknowledgments	8
Chapter 2. Exact category generalities	9
2.1. Recollections on exact categories	9
2.2. Homological properties of exact categories	14
2.3. Resolutions in exact categories	26
2.4. Monoidal exact categories and monads in exact categories	29
2.5. Quasi-abelian categories	34
2.6. Generators in exact categories	37
Chapter 3. Examples	49
3.1. Categories of topological vector spaces	49
3.2. The exact category with respect to a generator	61
3.3. Exact categories of Grothendieck type	64
3.4. The split exact structure	66
Chapter 4. Model structures on exact categories	69
4.1. Cotorsion pairs	69
4.2. Model structures on chain complexes	74
4.3. The projective model structure	86
4.4. The Dold-Kan correspondence	92
4.5. Comparison with other model structures	101
4.6. Examples	104
Chapter 5. Filtered and graded objects in exact categories	105
5.1. Preliminaries	105
5.2. Graded objects in general categories	106
5.3. Filtered objects in general categories	107
5.4. Filtered and graded objects in exact categories	116
Chapter 6. Homotopical algebra in exact categories	131
6.1. Algebra in monoidal (model) categories	131
6.2. Operads	134
6.3. Model categories of monoids and algebras	137
6.4. Homotopical algebra in exact categories	145
Appendix A. Model categories	151

A.1. Weak factorisation systems and model structures	151
A.2. Cofibrant generation	152
A.3. Homotopy colimits	152
A.4. Monoidal model categories	154
A.5. Transferred model structures	155
Bibliography	157
