

Contents

Chapter 1. Introduction	1
1.1. Background	2
1.2. The geometric reduced system	4
1.3. Modified scattering theory: An overview	6
1.4. Construction of an optical function	7
1.5. The asymptotic equations and the scattering data	9
1.6. An approximation	10
1.7. The main theorem	11
Acknowledgment	14
Chapter 2. Preliminaries	15
2.1. Notations	15
2.2. Commuting vector fields	15
2.3. Several pointwise bounds	17
2.4. A key theorem and a convention	17
2.5. The null condition of a matrix	18
Chapter 3. Construction of the optical function	19
3.1. The method of characteristics	20
3.2. Estimates for the optical function	23
3.3. A null frame	25
3.4. The connection coefficients	30
3.5. The Raychaudhuri equation	32
3.6. Continuity argument	35
Chapter 4. Derivatives of the optical function	45
4.1. Setup	45
4.2. Estimates on H	48
4.3. Estimates in Ω	60
4.4. Estimates for higher derivatives of q	79
4.5. More estimates	82
Chapter 5. The asymptotic equations and the scattering data	89
5.1. Derivatives under the new coordinate	90
5.2. The asymptotic equation for μ	93
5.3. The asymptotic equation for U	94
5.4. The scattering data	95
5.5. An exact solution to the reduced system	100
Chapter 6. Gauge independence	103

Chapter 7. Approximation	105
7.1. Definitions	105
7.2. Simplification	106
7.3. Estimates for \hat{q} and \hat{U}	109
7.4. Approximation of the optical function	120
7.5. Approximation of the solution to (1.1)	124
Bibliography	127
