

Contents

Chapter 1. Introduction	1
1.1. The pair of moduli spaces	2
1.2. Topology of the space of maximal representations	4
1.3. Comparison with Fock–Goncharov’s coordinates	5
Structure of the memoir	5
Acknowledgments	6
Chapter 2. Symplectic group, Lagrangians	7
2.1. Lagrangian Grassmannian and decorated Lagrangian Grassmannian	7
2.2. Configurations of Lagrangians	8
2.3. Maslov index	9
2.4. Universal coverings	10
2.5. Souriau index	11
2.6. Translation number	13
Chapter 3. Invariants of Lagrangian subspaces	15
3.1. Cross ratio	15
3.2. Triples and symplectic bases	17
3.3. Positive quintuples	19
3.4. Symplectic Λ -lengths	19
3.5. Ptolemy equation, exchange, and triangle relations	19
3.6. Symplectic Λ -lengths, Maslov index, and cross ratios	21
Chapter 4. Moduli spaces of framed and decorated local systems	23
4.1. Topological data	23
4.2. Fundamental group	23
4.3. Triangulations	24
4.4. Framed symplectic local systems	25
4.5. Twisted local systems	27
4.6. Vector fields	27
4.7. Triangulations and vector fields	28
4.8. Decorated twisted local systems	29
4.9. Framed twisted local systems	30
4.10. Transverse local systems	31
4.11. Configurations associated with framed local systems	31
4.12. Toledo number and maximal representations	32
4.13. Maximal framed local systems	37
4.14. Maximal framed twisted local systems	37

Chapter 5. Local systems on quivers and their framings	39
5.1. The quiver $\Gamma_{\mathcal{T}}$	39
5.2. Local systems on a quiver	40
5.3. Local systems and bases	41
5.4. Local systems on $\Gamma_{\mathcal{T}}$ and local systems on S	42
5.5. Twisted local systems on $\Gamma_{\mathcal{T}}$	42
5.6. Framed twisted local systems on $\Gamma_{\mathcal{T}}$	42
5.7. Symplectic bases of framed local systems	43
5.8. Configurations associated with framed local systems on $\Gamma_{\mathcal{T}}$	45
5.9. Maslov indices, cross ratios, and Toledo number for framed local systems	45
Chapter 6. \mathcal{X} -coordinates for maximal representations	49
6.1. A space of coordinates	49
6.2. Positive \mathcal{X} -coordinates	50
6.3. Maximal framed symplectic local systems	50
6.4. Reparametrization of the \mathcal{X} -coordinates	52
6.5. Image and fibers of the holonomy map	53
6.6. Over-parametrizations	54
Chapter 7. Topology of the space of maximal framed representations	57
7.1. Subspace of “singular” local systems	57
7.2. Coordinates for the subspaces	58
7.3. Retractions	59
7.4. Connected components	59
7.5. Path lifting property	60
7.6. Framing of singular representations	60
Chapter 8. Singularities of the space of framed maximal representations into $\mathrm{Sp}(4, \mathbf{R})$	63
8.1. Space of block diagonal local systems	63
8.2. Singular points	63
8.3. Parameters	64
8.4. Stabilizers	65
8.5. Singularity types	66
Chapter 9. General \mathcal{X} -coordinates	69
9.1. Pairs of real symmetric forms	69
9.2. Quadruples of transverse Lagrangians	72
9.3. Triple of decorated Lagrangians	73
9.4. Space of \mathcal{X} -coordinates	74
9.5. Positive locus	74
9.6. From coordinates to representations	74
9.7. Standard bases for framed local systems	75
9.8. Maslov indices	76
9.9. Pieces	77
9.10. Over-parametrization	78
9.11. Connected components	79

Chapter 10. \mathcal{X} -coordinates for representations into isogenic groups	81
10.1. Groups	81
10.2. Local systems	82
10.3. Some elements in G	82
10.4. Twisted local systems	85
10.5. Local systems on the quiver $\Gamma_{\mathcal{T}}$	85
10.6. Framed local systems	86
10.7. Parameters	86
10.8. Holonomy	87
10.9. Connected components	88
10.10. Homotopy type of the space of maximal framed local systems	89
Chapter 11. \mathcal{A} -coordinates for decorated local systems	91
11.1. Symplectic Λ -length	91
11.2. Decorated local systems on $\Gamma_{\mathcal{T}}$	91
11.3. Lifting arcs	92
11.4. \mathcal{A} -space	92
11.5. Change of coordinates: Flips	93
11.6. \mathcal{A} -coordinates for maximal decorated twisted local systems	94
11.7. From \mathcal{A} -coordinates to \mathcal{X} -coordinates	95
11.8. Berenstein–Retakh’s algebra	96
11.9. Geometric realization of the noncommutative surface	97
11.10. Zigzag path and expression of the Λ -lengths	97
Appendix A. Normal form for pair of quadratic forms	99
A.1. Bilinear forms and selfadjoint linear maps	99
A.2. More bilinear forms	99
A.3. When f has one split Jordan block	100
A.4. (Over the reals or the complex) Back transformation when f has one split Jordan block	102
A.5. When the minimal polynomial of f has one root	103
A.6. Orthogonality of generalized eigenspaces	103
A.7. (Over the reals) When f has two conjugate eigenvalues	104
A.8. Normal forms	105
A.9. Automorphism groups	106
Index	109
Index of Notation	111
Bibliography	115
