

Contents

Acknowledgments	vii
Chapter 1. Introduction	1
Chapter 2. Mathematical Problems and Main Theorems	9
2.1. Mathematical Problems	9
2.2. Structure of Solutions of Problem 2.9	17
2.3. Main Theorems	21
2.4. Change of the Parameters and Basic Properties	26
2.5. Main Theorems in the (v_∞, β) -Parameters	34
2.6. Further Features of Problem 2.34	44
Chapter 3. Uniform Estimates of Admissible Solutions	51
3.1. Directional Monotonicity Properties of Admissible Solutions	51
3.2. Uniform Positive Lower Bound of $\text{dist}(\Gamma_{\text{shock}}, \partial B_1(O_\infty))$	60
3.3. Uniform Estimates for the Ellipticity of Eq. (2.1.19)	73
3.4. Uniform Weighted $C^{2,\alpha}$ -Estimates Away From $\Gamma_{\text{sonic}}^\mathcal{O}$	79
3.5. Weighted $C^{2,\alpha}$ -Estimates Near $\Gamma_{\text{sonic}}^\mathcal{O}$	92
3.6. Compactness of the Set of Admissible Solutions	122
Chapter 4. Iteration Set	129
4.1. Mapping the Admissible Solutions to the Functions Defined in $\mathcal{Q}^{\text{iter}}$	129
4.2. Mapping the Functions in $\mathcal{Q}^{\text{iter}}$ to Approximate Admissible Solutions	143
4.3. Definition of the Iteration Set	147
4.4. Boundary Value Problem (4.3.16)	152
4.5. Properties of the Iteration Set \mathcal{K}	169
Chapter 5. Existence of Admissible Solutions Up to $\beta_d^{(v_\infty)}$	
– Proof of Theorem 2.31	181
5.1. Definition of the Iteration Map	181
5.2. Fixed Points of $\mathcal{I}(\cdot, \beta)$ and Admissible Solutions	189
5.3. Existence of Admissible Solutions for All $(v_\infty, \beta) \in \mathfrak{A}_{\text{weak}}$	198
Chapter 6. Optimal Regularity of Admissible Solutions	
– Proof of Theorem 2.33	205
Appendix A. The Shock Polar for Steady Potential Flow	211
Appendix B. Non-Existence of Self-Similar Strong Shock Solutions	219
Appendix C. Quasilinear Elliptic Equations in Two Variables	223
C.1. Ellipticity Principle for Self-Similar Potential Flow	223

C.2. Uniformly Elliptic Equations Away From the Corners	224
C.3. Quasilinear Degenerate Elliptic Equations	226
C.4. Estimates at a Corner for the Oblique Derivative Boundary Value Problems	227
C.5. Well-Posedness of a Nonlinear Boundary Value Problem	230
Bibliography	235
