

Contents

Chapter 1. Introduction	1
1.1. Cantor spaces and groups	2
1.2. Discussion and statements of results	3
1.3. Future directions	6
1.4. Objects of interest	7
1.5. A table summarising objects of interest	9
Chapter 2. Language, notation, and groups	11
2.1. Cantor spaces revisited	11
2.2. The groups $G_{n,r}$ and some interesting subgroups	13
Chapter 3. More on $G_{n,r,d}$, $G_{n,r,p}$, $G_{n,r}$, and $H_{n,r,\sim}$	17
Chapter 4. Local actions	19
Chapter 5. On the rational group \mathcal{R}_n and the related groups $\mathcal{R}_{n,r}$	21
5.1. Defining standard transducers and associated notation	21
5.2. Some technicalities for transducers	22
5.3. Transducers acting on $\mathfrak{C}_{n,r}$	23
5.4. Transducers, continuity, and ω -equivalence	24
5.5. Reducing transducers	25
5.6. The groups \mathcal{R}_n and $\mathcal{R}_{n,r}$	27
Chapter 6. Automorphisms admit few local actions	29
Chapter 7. Finding our place in the rational group $\mathcal{R}_{n,r}$	39
7.1. Getting in sync	39
7.2. Properties of strongly synchronizing and bi-synchronizing transducers	42
7.3. Invertible rational endomorphisms of $G_{n,r}$ are strongly synchronizing	45
Chapter 8. Combinatorial properties of strongly synchronizing transducers	53
8.1. Detecting if an automaton is strongly synchronizing	56
Chapter 9. The natural quotient $\mathcal{B}_{n,r} \twoheadrightarrow \mathcal{O}_{n,r}$	63
9.1. Classes and sets	63
9.2. Around a monoid $\widetilde{\mathcal{O}}_n$	64
9.3. Viable combinations, transducer completions, and nesting conditions on the groups $\mathcal{O}_{n,r}$	67
9.4. On Lipschitz conditions, the groups \mathcal{O}_n , and subgroups of interest	71
9.5. More on the dependence of $\text{Out}(G_{n,r})$ on r	74
9.6. Constructing inverses within \mathcal{O}_n	76

Chapter 10. Root functions and detecting flavours of synchronicity	79
Chapter 11. Open problems	83
Appendix A. The inversion construction	85
A.1. General transducers	85
A.2. Transducers acting on $\mathfrak{C}_{n,r}$	88
Bibliography	91
Index	93
