

Contents

Preface	ix
Preface to the English Edition	xi
Objectives and Outline of These Books	xiii
Chapter 9. Modular Forms	1
9.1. Ramanujan's discoveries	4
9.2. Ramanujan's Δ and holomorphic Eisenstein series	17
9.3. Automorphy and functional equations	25
9.4. Real analytic Eisenstein series	31
9.5. Kronecker's limit formula and regularized products	47
9.6. Modular forms for $SL_2(\mathbb{Z})$	64
9.7. Classical modular forms	74
Summary	83
Exercises	84
Chapter 10. Iwasawa Theory	87
10.0. What is Iwasawa theory?	88
10.1. Analytic p -adic zeta functions	97
10.2. Ideal class groups and cyclotomic \mathbb{Z}_p -extensions	126
10.3. Iwasawa main conjecture	147
Summary	164
Exercises	164
Chapter 11. Modular forms (II)	167
11.1. Automorphic forms and representation theory	168
11.2. Poisson summation formula	174
11.3. Selberg trace formula	180
11.4. Langlands conjectures	185
Summary	187

Chapter 12. Elliptic curves (II)	189
12.1. Elliptic curves over the rational number field	189
12.2. Fermat's Last Theorem	201
Summary	208
Bibliography	211
Answers to Questions	217
Answers to Exercises	219
Index	225
