Preface	xi
Notation	xv
Part I. Preliminaries on Galois cohomology	1
Chapter 1. Group Cohomology	3
1.1. Definition and basic properties	3
1.2. Behavior under change of group	11
1.3. Cohomology of finite groups	16
1.4. Permutation and stably permutation modules	17
Chapter 2. Galois Cohomology	19
2.1. Descent for fibered categories	19
2.2. Forms and first Galois cohomology	26
2.3. Cohomology of profinite groups	31
2.4. Cohomology of the absolute Galois group	36
2.5. Picard group as a stably permutation module	38
2.6. Torsors	40
2.7. Cohomology of the inverse limit	41
2.8. Further reading	43
Part II. Brauer group	45
Chapter 3. Brauer Group of a Field	47
3.1. Definition and basic properties	47
3.2. Brauer group and arithmetic properties of fields	56
3.3. Brauer group and Severi–Brauer varieties	58
3.4. Further reading	63
Chapter 4. Residue Map on a Brauer Group	65
4.1. Complete discrete valuation fields	65
4.2. Brauer group of a complete discrete valuation field	68
4.3. Unramified Brauer group of a function field	73
4.4. Brauer group of a variety	75
4.5. Geometric meaning of the residue map	78
4.6. Further reading	83
Part III. Applications to rationality problems	85
Chapter 5. Example of a Unirational Non-rational Variety	87

5.1. Geometric data	87
5.2. Construction of a group	88
5.3. Further reading	91
Chapter 6. Arithmetic of Two-dimensional Quadrics	93
6.1. Invariants of quadrics	93
6.2. Geometric meaning of invariants of quadrics	96
6.3. Degenerations of quadrics	98
6.4. Further reading	99
Chapter 7. Non-rational Double Covers of \mathbb{P}^3	101
7.1. More on the unramified Brauer group	101
7.2. Families of two-dimensional quadrics	102
7.3. Construction of a geometric example	103
7.4. Some unirationality constructions	105
7.5. Further reading	109
Chapter 8. Weil Restriction and Algebraic Tori	111
8.1. Weil restriction	111
8.2. Algebraic tori	115
8.3. Algebraic tori and Galois modules	117
8.4. Universal torsor	119
8.5. Châtelet surfaces and stably permutation modules	120
8.6. Further reading	125
Chapter 9. Example of a Non-rational Stably Rational Variety	127
9.1. Plan of the construction	127
9.2. The fields K , k' , and K'	128
9.3. Non-rational conic bundle	129
9.4. Rational intersection of two quadrics	130
9.5. Stable birational equivalence between X and V	134
9.6. One more construction of stable rationality	136
9.7. Further reading	136
Part IV. The Hasse principle and its failure	137
Chapter 10. Minkowski–Hasse Theorem	139
10.1. Preliminaries	139
10.2. Quadrics over local fields	140
10.3. Reduction to the case $\dim(Q) = 1$	142
10.4. The case $\dim(Q) \leq 1$	143
10.5. Other examples of the Hasse principle	145
10.6. Further reading	146
Chapter 11. Brauer–Manin Obstruction	147
11.1. Definition of the Brauer–Manin obstruction	147
11.2. Computation of the Brauer–Manin obstruction	149
11.3. Brauer–Manin obstruction for a genus-one curve	154
11.4. Further reading	157
Appendix A. Étale Cohomology	159

A.1. Étale coverings	159
A.2. Sheaves in the étale topology	159
A.3. Cohomology of étale sheaves of abelian groups	160
A.4. First étale cohomology with non-abelian coefficients	161
A.5. Kummer sequence	162
A.6. Brauer group	164
A.7. The case of a complex algebraic variety	164
Bibliography	167
Index	177
