

CONTENTS

INTRODUCTION	9
§1 What is this book, and who is it for?	9
§2 Our math circles: Where is this book from?	10
§3 Some special features of this book	11
§4 Planning a session	12
§5 Running the session	13
§6 Problem-solving techniques	15
§7 Jump right in!	15
BULGARIAN SOLITAIRE	17
§1 Introduction	17
§2 Exploring the game	18
→ Jump right in!	20
§2.1 The value of giving time to data collection	20
§2.2 How to collect the data	21
§2.3 A full data set leads to questions	22
§2.4 Integer partitions	23
§2.5 The fixed position case	24
§2.6 The number of cycles	25
§3 The tilted model (optional)	26
§3.1 The game settles down	27
§3.2 The fixed positions appear	30
§3.3 The cycles appear	30
§4 Further investigations	33
SONA	35
§1 Introduction	35
§2 Some simplifying assumptions about sona	37
→ Jump right in!	38
§3 Playing with graph paper	38

§4 Some counting questions	41
§4.1 Number of turns	41
§4.2 Number of intersections	42
§4.3 How to approach counting questions	43
§5 The number of lines needed	43
§6 Exploring why the gcd shows up	44
§6.1 Examine square arrays	45
§6.2 Figure out what happens when we append or remove a square	46
§6.3 Use the previous step to reduce the problem to a smaller one	48
§6.4 Realize that we are describing the gcd	48
§7 Further investigations	51
Handout: All about Sona!	52

NIM & JIM **59**

§1 Introduction	59
§2 Warm-up games: Don't Be Greedy and Two-Pile Nim	60
§2.1 Don't Be Greedy	60
→ Jump right in!	64
§2.2 Two-Pile Nim	64
§2.3 Optional: One or One or One of Each	65
§2.4 Optional: Describing a winning strategy	66
§3 The Game of Jim	67
§3.1 Facilitator's guide to the handout for this chapter	69
Handout: The Game of Jim	70
§1 Finishing up: Back to Nim	73
§2 Extensions/Challenges	74
§3 A methodical analysis and solutions to the misère versions	74
§3.1 Don't Be Greedy, revisited	75
§3.2 Two-Pile Nim, revisited	77
§3.3 One or One or One of Each, revisited	79
§3.4 Three-Pile Nim, revisited	81
§4 An alternate sequencing of these games	82
§5 Further investigations	83

SPLITTING TO MARS 85

§1 Introduction	85
§2 Get acquainted with the idea of splitting	86
→ Jump right in!	88
§3 Move to Venn diagrams	88
§4 Exploration and practice with Venn diagrams	90
§5 Some discussion questions about splitting	91
§6 Focus on scientists with just one specialty	93
§7 The case when no scientists have just one specialty	94
§8 A few more configurations and a conclusion	96
§9 Further investigations	97
Handout: Splitting to Mars	100

HYPERBINARY NUMBERS AND THE CALKIN-WILF TREE 107

§1 Introduction	107
→ Jump right in!	108
§2 Motivation: Making numbered lists	108
§3 Hyperbinary numbers	110
§3.1 Binary representations	110
§3.2 Hyperbinary representations	111
§3.3 The pattern for odd numbers	113
§3.4 The pattern for even numbers	115
§3.5 The patterns determine the sequence	116
§4 The Calkin–Wilf tree	117
§5 Putting the two investigations together	119
§6 Further investigations	122
§7 Appendix: Proofs of the remaining claims (optional)	123
Handout: Hyperbinary numbers	125

GLOSSARY 129

§1 Binary numbers	129
§2 Greatest common divisor	130

§3 Pigeonhole principle	131
§4 Triangle numbers	133
§5 Venn diagrams	135

ABOUT THE AUTHORS **137**

THANK YOU! **146**
