

CONTENTS

Foreword	xi
1. Local semicircle law for Wigner matrices	1
1.1. Introduction	1
Outline	2
Conventions	3
1.2. The local law	3
1.2.1. The Green function	4
1.2.2. Local and global laws	6
1.2.3. The local law for Wigner matrices	8
1.2.4. Applications of Theorem 1.2.6	12
1.2.5. Sketch of the proof of Theorem 1.2.6	17
1.3. Proof of Theorem 1.2.6 (a): preliminaries	18
1.4. Outline of the proof of Theorem 1.2.6	20
1.5. Proof of Theorem 1.2.6 (b): weak local law	22
1.6. Proof of Theorem 1.2.6 (c): optimal error bounds	29
1.7. Fluctuation averaging: proof of Proposition 1.6.1	32
1.8. Semicircle law on small scales: proof of Theorem 1.2.8	42
1.9. Eigenvalue rigidity: proof of Theorem 1.2.9	44
1.10. Extension of the spectral domain in the local law	46
1.10.1. Extension to all z down to the real axis	47
1.10.2. Local law outside of the spectrum	48
1.11. Local law and comparison arguments	51
1.11.1. Overview of the Green function comparison method	51
1.11.2. Local eigenvalue statistics	54
1.11.3. Green function comparison for local eigenvalue statistics	55
1.11.4. Green function comparison for the spectral edge and eigenvectors ..	62
1.12. Outlook: some further developments	64
1.12.1. Isotropic laws	64
1.12.2. Beyond Wigner matrices	65
1.13. Appendix	68
1.13.1. Schur's complement formula and proof of Lemma 1.3.5	68
1.13.2. Basic properties of the semicircle distribution and proof of Lemma 1.5.5	69

1.13.3. The Helffer-Sjöstrand formula	70
1.13.4. Multilinear large deviation estimates: proof of Lemma 1.3.6	71
1.13.5. Proof of Lemma 1.2.1	73
1.13.6. Global semicircle law and proof of Theorem 1.2.4	74
1.13.7. Extreme eigenvalues: the Füredi-Komlós argument	78
1.13.8. Extreme eigenvalues: sub-Gaussian entries	81
Acknowledgements	83
Bibliography	85
2. Spectrum of random graphs	91
2.1. Spectral measure of a fixed graph	91
2.1.1. Adjacency operator	91
2.1.2. Spectral measure at a vector	92
2.1.3. Operations on graphs and spectrum	93
2.1.4. Finite graphs	95
2.1.5. Cayley graphs	96
2.2. Spectral measure of unimodular random graphs	99
2.2.1. Extension to weighted graphs	102
2.2.2. Examples of unimodular graphs and local weak limits	102
2.2.3. Spectral measure	103
2.2.4. Pointwise continuity of the spectral measure	107
2.3. Atoms and eigenvectors	109
2.3.1. Finite graphs	109
2.3.2. Finite pending subgraphs	110
2.3.3. Computation of the atom at 0	112
2.3.4. Quantum Percolation	112
2.4. Existence of continuous spectral measure	113
2.4.1. A few answers and many questions	113
2.4.2. Two Tools for bounding eigenvalues multiplicities	116
2.4.3. Supercritical edge percolation on \mathbb{Z}^2	124
2.4.4. Spectrum of Unimodular Trees	126
2.5. Local laws and delocalization of eigenvectors	134
2.5.1. Cauchy-Stieltjes transform	136
2.5.2. Bounds using the resolvent	138
2.5.3. Local convergence and convergence of the resolvent	139
2.5.4. Application to tree-like regular graphs	141
Acknowledgements	144
Bibliography	145
3. Spectrum of deformed random matrices and free probability	151
3.1. Introduction	151

3.1.1. Classical Random matricial models and deformations	153
3.1.2. Convergence of spectral measures	155
3.1.3. Convergence of extreme eigenvalues	156
3.1.4. Eigenvectors associated to outliers	159
3.2. Free probability theory	159
3.2.1. Free convolution	160
3.2.2. Analytic subordinations	162
3.2.3. Asymptotic freeness of independent random matrices	163
3.3. Study of LSD of deformed ensembles through free probability theory ...	164
3.3.1. Free probabilistic interpretation of LSD	164
3.3.2. Limiting supports of LSD	166
3.4. Outliers of general spiked models	169
3.4.1. Location of the outliers	170
3.4.2. Eigenvectors	176
3.4.3. Unified understanding	178
3.5. Fluctuations at edges of spiked deformed models	179
3.5.1. The Gaussian case	179
3.5.2. The general i.i.d case	183
Bibliography	185
