

CONTENTS

Introduction	xi
TONY PANTEV & GABRIELE VEZZOSI — <i>Introductory topics in derived algebraic geometry</i>	
1. Introduction	1
2. Affine derived geometry	2
3. Étale topology and derived stacks	9
4. Derived algebraic stacks	11
5. Lurie’s Representability Theorem	13
6. DAG “explains” classical deformation theory	15
7. Forms and closed forms	21
8. Shifted symplectic geometry	28
References	36
DAVID BEN-ZVI & DAVID NADLER — <i>Nonlinear Traces</i>	
1. Introduction	40
2. Overview	46
3. Traces in category theory	58
4. Traces in Geometry	68
5. Traces for sheaves	74
References	82
DAMIEN CALAQUE & JULIEN GRIVAUX — <i>Formal moduli problems and formal derived stacks</i>	
Introduction	85
1. Introduction to pointed formal moduli problems for commutative algebras	92
2. General formal moduli problems and Koszul duality	100
3. DG-Lie algebroids and formal moduli problems under $\mathrm{Spec}(A)$	119
4. Global aspects	130
References	144

ETIENNE MANN & MARCO ROBALO — <i>Gromov-Witten theory with derived algebraic geometry</i>	147
1. Introduction	147
2. Moduli space of stable maps, cohomological field theory and operads	150
3. Lax algebra structure on X	158
4. Proof of our main result	162
5. Comparison with other definition	166
A. Proof of Theorem 5.3.11	177
B. Proof of Theorem 5.4.3.(1)	178
C. Alternative proof of Corollary B.4 in the affine case	180
References	183
PAVEL SAFRONOV — <i>Lectures on shifted Poisson geometry</i>	187
Introduction	187
1. Shifted Poisson algebras	190
2. Coisotropic and Lagrangian structures	207
3. Examples	221
References	228
