Preface	xiii
Introduction	1
Armand Borel, Automorphic Forms on Reductive Groups	5
Introduction	7
1. Notation	7
2. Notion of automorphic form	8
3. First properties of automorphic forms	9
4. Reductive groups (review)	12
5. Arithmetic subgroups. Reduction theory	19
6. Constant terms. The basic estimate	24
7. Finite dimensionality of $A(\Gamma, J, \xi)$	28
8. Convolution operators on cuspidal functions	29
9. Automorphic forms and the regular representation on $\Gamma \backslash G$	30
10. A decomposition of the space of automorphic forms.	32
11. Some estimates of growth functions	33
12. Eisenstein series	35
Bibliography	39
L. Clozel, Spectral Theory of Automorphic Forms	41
Foreword	43
Lecture 1. Mostly $SL(2)$	47

Lecture 2. The spectral decomposition of $L^2(G(\mathbb{Q})\backslash G(\mathbb{A}))$: Arthur's conjectures	57
Lecture 3. Known bounds for the cuspidal spectrum and the Burger-Sarnak method	65
Lecture 4. Applications: control of the spectrum	79
Appendix: All reductive adélic groups are tame	87
Bibliography	89
James W. Cogdell, L-functions and Converse Theorems for GL_n	95
Introduction	97
Lecture 1. Fourier expansions and multiplicity one	101
Lecture 2. Eulerian integrals for GL_n	111
Lecture 3. Local L -functions	123
Lecture 4. Global L -functions	137
Lecture 5. Converse theorems	147
Lecture 6. Converse theorems and functoriality	161
Bibliography	173
Philippe Michel, Analytic Number Theory and Families of Automorphic L-functions	179
Foreword	181
Lecture 1. Analytic properties of individual L -functions	187
Lecture 2. A review of classical automorphic forms	211
Lecture 3. Large sieve inequalities	223
Lecture 4. The subconvexity problem	241
Lecture 5. Some applications of subconvexity	267
Bibliography	285
Freydoon Shahidi, Langlands-Shahidi Method	297
Foreword	299
Lecture 1. Basic concepts	301
Lecture 2. Eisenstein series and L -functions	307
Lecture 3. Functional equations and multiplicativity	315

Lecture 4. Holomorphy and boundedness; applications	321
Bibliography	327
Audrey Terras, Arithmetical Quantum Chaos	331
Abstract	333
Lecture 1. Finite models	335
Lecture 2. Three symmetric spaces	355
Bibliography	371
David A. Vogan, Jr, Isolated Unitary Representations.	377
Bibliography	397
Wen-Ching Winnie Li, Ramanujan Graphs and Ramanujan Hypergraphs	399
Introduction	401
Lecture 1. Ramanujan graphs and connections with number theory	403
Lecture 2. Ramanujan hypergraphs	415
Bibliography	425
