|--|-----|
| Preface  | ix  |
| <b>Benson Farb, Richard Hain, and Eduard Looijenga</b>   |     |
| <b>Introduction</b>  | 1   |
| <b>Yair N. Minsky</b>  |     |
| <b>A Brief Introduction to Mapping Class Groups</b>  | 5   |
| 1. Definitions, examples, basic structure  | 7   |
| 2. Hyperbolic geometry, laminations and foliations   | 19  |
| 3. The Nielsen-Thurston classification theorem   | 28  |
| 4. Classification continued, and consequences  | 35  |
| 5. Further reading and current events  | 39  |
| Bibliography   | 41  |
| <b>Ursula Hamenstädt</b>   |     |
| <b>Teichmüller Theory</b>  | 45  |
| Introduction   | 47  |
| Lecture 1. Hyperbolic surfaces   | 49  |
| Lecture 2. Quasiconformal maps   | 63  |
| Lecture 3. Complex structures, Jacobians and the Weil-Petersson form                                       | 75  |
| Lecture 4. The curve graph and the augmented Teichmüller space   | 85  |
| Lecture 5. Geometry and dynamics of moduli space   | 93  |
| Bibliography   | 107 |
| <b>Nathalie Wahl</b>   |     |
| <b>The Mumford Conjecture, Madsen-Weiss and Homological Stability for Mapping Class Groups of Surfaces</b> | 109 |
| Introduction   | 111 |
| Lecture 1. The Mumford conjecture and the Madsen-Weiss theorem   | 113 |
| 1. The Mumford conjecture  | 113 |
| 2. Moduli space, mapping class groups and diffeomorphism groups  | 113 |
| 3. The Mumford-Morita-Miller classes   | 115 |

|   |     |
|---|-----|
| 4. Homological stability  | 115 |
| 5. The Madsen-Weiss theorem   | 117 |
| 6. Exercises  | 118 |
| Lecture 2. Homological stability: geometric ingredients               | 119 |
| 1. General strategy of proof  | 119 |
| 2. The case of the mapping class group of surfaces                    | 119 |
| 3. The ordered arc complex  | 120 |
| 4. Curve complexes and disc spaces                                    | 123 |
| 5. Exercises  | 124 |
| Lecture 3. Homological stability: the spectral sequence argument      | 127 |
| 1. Double complexes associated to actions on simplicial complexes     | 127 |
| 2. The spectral sequence associated to the horizontal filtration      | 128 |
| 3. The spectral sequence associated to the vertical filtration        | 128 |
| 4. The proof of stability for surfaces with boundaries                | 129 |
| 5. Closing the boundaries   | 131 |
| 6. Exercises  | 131 |
| Lecture 4. Homological stability: the connectivity argument           | 133 |
| 1. Strategy for computing the connectivity of the ordered arc complex | 133 |
| 2. Contractibility of the full arc complex                            | 134 |
| 3. Deducing connectivity of smaller complexes                         | 135 |
| 4. Exercises  | 136 |
| Bibliography  | 137 |
| <br>  |     |
| <b>Søren Galatius</b>   |     |
| <b>Lectures on the Madsen–Weiss Theorem</b>                           | 139 |
| Lecture 1. Spaces of submanifolds and the Madsen–Weiss Theorem        | 143 |
| 1.1. Spaces of manifolds  | 143 |
| 1.2. Exercises for Lecture 1  | 147 |
| Lecture 2. Rational cohomology and outline of proof                   | 149 |
| 2.1. Cohomology of $\Omega^\infty \Psi$                               | 149 |
| 2.2. Outline of proof   | 151 |
| 2.3. Exercises for Lecture 2  | 152 |
| Lecture 3. Topological monoids and the first part of the proof        | 153 |
| 3.1. Topological monoids  | 153 |
| 3.2. Exercises for Lecture 3  | 159 |
| Lecture 4. Final step of the proof                                    | 161 |
| 4.1. Proof of theorem 4.3   | 163 |
| 4.2. Exercises for Lecture 4  | 165 |
| Bibliography  | 167 |

|   |     |
|---|-----|
| <b>Andrew Putman</b>  |     |
| <b>The Torelli Group and Congruence Subgroups of the Mapping Class Group</b>  | 169 |
| Introduction  | 171 |
| Lecture 1. The Torelli group  | 173 |
| Lecture 2. The Johnson homomorphism   | 179 |
| Lecture 3. The abelianization of $\text{Mod}_{\mathbf{g},\mathbf{n}}(\mathbf{p})$   | 185 |
| Lecture 4. The second rational homology group of $\text{Mod}_{\mathbf{g}}(\mathbf{p})$  | 189 |
| Bibliography  | 195 |
| <b>Carel Faber</b>  |     |
| <b>Tautological Algebras of Moduli Spaces of Curves</b>   | 197 |
| Introduction  | 199 |
| Lecture 1. The tautological ring of $M_g$   | 201 |
| Exercises   | 208 |
| Lecture 2. The tautological rings of $\overline{M}_{g,n}$ and of some natural partial compactifications of $M_{g,n}$            | 211 |
| Exercises   | 215 |
| Bibliography  | 217 |
| <b>Scott A. Wolpert</b>   |     |
| <b>Mirzakhani's Volume Recursion and Approach for the Witten-Kontsevich Theorem on Moduli Tautological Intersection Numbers</b> | 221 |
| Prelude   | 225 |
| Lecture 1. The background and overview  | 231 |
| Lecture 2. The McShane-Mirzakhani identity  | 239 |
| Lecture 3. The covolume formula and recursion   | 243 |
| Lecture 4. Symplectic reduction, principal $S^1$ bundles and the normal form  | 249 |
| Lecture 5. The pattern of intersection numbers and Witten-Kontsevich  | 255 |
| Questions for the problem sessions  | 261 |
| Bibliography  | 265 |
| <b>Martin Möller</b>  |     |
| <b>Teichmüller Curves, Mainly from the Viewpoint of Algebraic Geometry</b>  | 267 |
| 1. Introduction   | 269 |

|      |   |     |
|------|---|-----|
| 2.   | Flat surfaces and $\mathrm{SL}_2(\mathbb{R})$ -action                           | 270 |
| 2.1. | Flat surfaces and translation structures  | 270 |
| 2.2. | Affine groups and the trace field   | 272 |
| 2.3. | Strata of $\Omega\mathcal{M}_g$ and hyperelliptic loci                          | 276 |
| 2.4. | Spin structures and connected components of strata                              | 276 |
| 2.5. | Stable differentials and Deligne-Mumford compactification                       | 277 |
| 3.   | Curves and divisors in $\mathcal{M}_g$  | 277 |
| 3.1. | Curves and fibered surfaces   | 278 |
| 3.2. | Picard groups of moduli spaces  | 279 |
| 3.3. | Special divisors on moduli spaces   | 279 |
| 3.4. | Slopes of divisors and of curves in $\mathcal{M}_g$                             | 282 |
| 4.   | Variation of Hodge structures and real multiplication                           | 284 |
| 4.1. | Hilbert modular varieties and the locus of real multiplication                  | 288 |
| 4.2. | Examples  | 289 |
| 5.   | Teichmüller curves  | 290 |
| 5.1. | Square-tiled surfaces and primitivity   | 291 |
| 5.2. | The VHS of $\mathcal{T}$ curves   | 292 |
| 5.3. | Proof of the VHS decomposition and real multiplication                          | 294 |
| 5.4. | Cusps and sections of $\mathcal{T}$ curves                                      | 296 |
| 5.5. | The classification problem of $\mathcal{T}$ curves: state of the art            | 300 |
| 6.   | Lyapunov exponents  | 301 |
| 6.1. | Motivation: Asymptotic cycles, deviations and the wind-tree model               | 301 |
| 6.2. | Lyapunov exponents  | 303 |
| 6.3. | Lyapunov exponents for Teichmüller curves                                       | 304 |
| 6.4. | Non-varying properties for sums of Lyapunov exponents                           | 309 |
| 6.5. | Lyapunov exponents for general curves in $\mathcal{M}_g$ and in $\mathcal{A}_g$ | 312 |
| 6.6. | Known results and open problems   | 314 |
|      | Bibliography  | 315 |
|      | <b>Makoto Matsumoto</b>   |     |
|      | <b>Introduction to arithmetic mapping class groups</b>                          | 319 |
|      | Introduction  | 321 |
|      | Lecture 1. Algebraic fundamental groups   | 325 |
|      | Lecture 2. Monodromy representation on fundamental groups                       | 333 |
|      | Lecture 3. Arithmetic mapping class groups                                      | 335 |
|      | Lecture 4. Topology versus arithmetic   | 337 |
|      | Lecture 5. The conjectures of Oda and Deligne-Ihara                             | 341 |
|      | APPENDIX: Algebraic fundamental groups via fiber functors                       | 349 |
|      | Bibliography  | 355 |
