

# Index

- n*-player game, *see also* game with finitely many players
- approximate Nash equilibrium, 14, 20
- approximation by a neural network, 40
- best response, 8
- closed loop control, 4, 8
- common noise, 3, 37
  - law of large numbers, 7
- compactness method, 21
- contract theory, 39
- convergence problem, 1
  - concentration, 41
  - deviations, 42
  - fluctuations, 42
- cryptocurrencies and Bitcoin mining, 11
- decentralized control policy, 14
- displacement convexity, 22, 30
- empirical measure, 3, 6
  - central limit theorem, 7
  - convergence, 30
  - Sanov theorem, 12
- equilibrium, 3, 8
  - existence, 11, 12, 15, 18
  - uniqueness, 11, 12
- equilibrium value function, 12
- exchangeability, 8
  - law of large numbers, 7
- fictitious play, 9
- fixed point problem, 7, 10, 11, 18
  - fictitious play approximation, 9
  - numerical examples of Picard iterations, 6
  - solved by Newton iterations, 10, 23
  - solved by Picard iterations, 21
- flat derivative, 15, 20, 49
- forward-backward system, 2
- game with finitely many players, 13, 15, 22, 27
- growth models, 17
- Hamilton-Jacobi-Bellman equation, 8, 20
- interacting diffusions, 4, 13
  - central limit theorem, 17
  - large deviations, 21
- Itô's formula for measure-valued process, 19
- Kolmogorov-Fokker-Planck equation, 9, 11, 20
- Lasry-Lions monotonicity condition, 11, 21
- linear-quadratic, 5, 6, 8, 12, 23, 25, 31
- Lions derivative, 16
- local feedback law, 6
- major player, 4
- Markov feedback form, 6, 14
- master equation, 5, 21, 33, 44
  - connection with Nash system, 16
- McKean-Vlasov
  - control problem, *see also* mean field control problem
  - FBSDE, 27
  - SDE, 5, 7, 23
- mean field control problem, 4, 10, 24
  - optimization method, 27
  - PDE system, 15
  - reinforcement learning, 51
- mean field game
  - equilibrium, 8
  - ergodic, 36
  - for electricity markets, 16
  - for oil production, 14
  - of control, 30
  - of optimal stopping, 8
  - of stopping, 29
  - on a finite state space, 29
  - reinforcement learning, 54
  - relaxed form, 23
  - variational structure, *see also* potential game
  - with a finite state space, 44
  - with infinite time horizon, 9, 37
  - with one principal and many agents, 42
  - with two populations, 37

- mean field game system, 2, 10, 13
  - finite difference scheme, 16
  - numerical scheme, 13
  - semi-Lagrangian scheme, 18
- mean field games
  - of control, 23
- model
  - of bank runs, 8
  - of epidemic containment, 51
  - of price impact, 6
- monotone operator, 36
- monotonicity condition, 15
- moral hazard, 39
  
- Nash equilibrium, 4, 7, 14
- Nash system, 15, 28
  
- open loop control, 4, 7, 14
- optimal feedback, 10, 11, 26, 28
  
- potential game, 24, 27
- price of anarchy, 11
- propagation of chaos, 8, 14
  - central limit theorem, 17
  - large deviations, 21
  
- relaxed control, 21
- Riccati equation, 10, 27
  
- Schauder's theorem, 11, 19
- social optimum, 4
- stochastic optimal control problem, 8
- systemic risk, 3
  
- Wasserstein derivative, 16, 31
- Wasserstein distance, 14
- Wasserstein space, 15
- weak convergence of probability measures,
  - 3, 28
