

## TABLE DES MATIÈRES

RÉSUMÉ/ABSTRACT .....	iii
LUC ROBBIANO. — <i>Effets régularisants pour l'équation de Schrödinger</i> .....	1
1. Présentation du problème .....	2
2. Résultats de régularité 1/2 pour le Laplacien .....	2
3. Méthode utilisant la résolvante .....	7
4. La méthode des commutateurs .....	10
5. Méthode d'analyse microlocale .....	18
Références .....	43
MOUEZ DIMASSI & ANH TUAN DUONG. — <i>Semi-classical asymptotics for the Schrödinger operators with constant magnetic fields</i> .....	45
1. Introduction .....	45
2. Formulations of main results .....	47
3. Ideas of the proofs .....	50
References .....	56
LIVIU I. IGNAT. — <i>The Dispersion property for Schrödinger equations</i> .....	59
1. Introduction .....	59
2. Discrete equations .....	61
3. Equation on graphs .....	63
References .....	66
OANA IVANOVICI, GILLES LEBEAU & FABRICE PLANCHON. — <i>Estimations de Strichartz pour l'équation des ondes dans un domaine strictement convexe</i> .....	69
1. Introduction .....	70
2. Paramétrice pour un domaine modèle .....	73
3. Paramétrice dans le cas d'un domaine général .....	75
4. Les estimations de Strichartz optimales dans le régime des queues d'arondes .....	77
Références .....	79
LUC MILLER. — <i>Spectral inequalities for the control of linear PDEs</i> .....	81
1. Background on the interior control of linear PDEs .....	82
2. Resolvent conditions for parabolic equations (main results) .....	84
3. Improvements of the Lebeau-Robbiano strategy .....	88
4. Proofs of the main result and counter-example, basic examples .....	93
References .....	97

MARIUS PAICU. — <i>Global solutions for inhomogeneous incompressible fluids with bounded density</i> .....	99
1. Navier-Stokes equations for inhomogeneous fluids .....	100
2. The main objectives .....	101
3. Strong solutions in critical spaces .....	102
4. Inhomogeneous fluids with bounded density and non-lipschitz velocity .....	102
5. Proof of Theorem 4.1 for $1 < p < \frac{dr}{3r-2}$ .....	104
6. Global existence for large densities in the 2D case .....	111
7. The case of highly oscillating data .....	114
8. Main result in the case of slowly varying data .....	117
References .....	120
YANNICK PRIVAT, EMMANUEL TRÉLAT & ENRIQUE ZUAZUA. — <i>Optimal location of sensors and actuators for wave and heat processes</i> .....	123
1. Introduction .....	124
2. Modeling and problem formulation .....	127
3. Solving the problem .....	129
4. Nonexistence of an optimal set and remedies .....	131
5. The case of parabolic Pde's .....	134
6. Conclusion .....	137
References .....	138
XUE PING WANG. — <i>Time-decay of solutions to dissipative Schrödinger equations</i> .....	141
1. Introduction .....	141
2. Absence of real resonances at low energies .....	144
3. Time-decay of solutions .....	146
4. Positive real resonances .....	151
References .....	153
