

Contents

1. Introduction	1
1.1.	1
1.2. Notation, conventions and review	3
2. The homotopic category	6
2.1. k -spaces	6
2.2. The homotopic category	14
2.3. Base change by a smooth morphism	26
3. Homotopic excision, homotopic purity and projective blowups	30
3.1. Mayer-Vietoris property and Čech descent	30
3.2. Homotopic purity	35
3.3. Projective blowups	42
4. Homotopic classification of vector bundles	44
4.1. Excision properties for the Picard group and algebraic K -theory	44
4.2. Homotopic classification of vector bundles and of \mathbf{GL} -torsors	51
4.3. Higher algebraic K -theory and periodicity	64
4.4. Homotopy theory over a regular scheme	72
Appendix A: Review of homotopic algebra	74
A.1. Lifting properties	74
A.2. Homotopy theory associated to a quasi-simplicial category with cofibrations and weak equivalences	77
A.3. Homotopic limits and colimits	90
Appendix B: Ample families of invertible bundles on a scheme	100
B.1. Elementary open subsets of a scheme	100
B.2. Schemes admitting an ample family	100
B.3. Smooth k -schemes and k -spaces	101
B.4. Torsors of Jouanolou-Thomason and k -spaces	101
