

CONTENTS

Introduction	1
1. An equivalent presentation of integrable mixed twistor \mathcal{D}-modules	9
1.1. A review of twistor structures in dimension zero	9
1.2. Presentation of the results in Chapter 1	17
1.3. The category ${}_{\iota}\text{MTM}^{\text{int}}(X)$	21
1.4. Proof of Theorem 1.25	32
1.5. Real and good \mathbb{k} -structures	38
1.6. Exponential twist	39
1.7. Applications of the compatibility between the functors	42
2. Irregular mixed Hodge modules	51
2.1. Introduction to Chapter 2	51
2.2. Rescaling an integrable \mathcal{R} -triple	52
2.3. Well-rescalable integrable \mathcal{R} -triples	59
2.4. Irregular mixed Hodge modules	69
2.5. Rigid irreducible holonomic $\mathcal{D}_{\mathbb{P}^1}$ -modules	77
3. Irregular mixed Hodge structures	
<i>In collaboration with Jeng-Daw Yu</i>	81
3.1. Introduction to Chapter 3	81
3.2. Connections with a pole of order two	82
3.3. Irregular mixed Hodge structures	95
3.4. Application to Künneth and Thom-Sebastiani formulas	98
3.5. Finite group actions and alternating products	105
3.6. Exponential mixed Hodge structures and irregular Hodge structures	110
Appendix	113
A.1. Base change theorems in the complex analytic setting	113
A.2. Compatibility between duality and external product	115
Bibliography	117
Index of notation	123
Index	125
