

CONTENTS

Introduction	vii
Description of the paper	ix
Acknowledgements	x
1. Background material on operads and groupoids	1
1.1. \mathfrak{S} -modules	1
1.2. Operads	2
1.3. Example of an operad: Stasheff polytopes	3
1.4. Modules over an operad: Bott-Taubes polytopes	4
1.5. Convention: pointed versions	4
1.6. Group actions	5
1.7. Semi-direct products and fake pull-backs	6
1.8. Prounipotent completion	7
2. Operads associated with configuration spaces (associators)	9
2.1. Compactified configuration space of the plane	9
2.2. A presentation for the pure braid group	10
2.3. The operad of parenthesized braids	10
2.4. The operad of chord diagrams	13
2.5. The operad of parenthesized chord diagrams	14
2.6. Drinfeld associators	16
2.7. Grothendieck-Teichmüller group	17
2.8. Graded Grothendieck-Teichmüller group	19
2.9. Bitorsors	20
3. Modules associated with configuration spaces (elliptic associators)	21
3.1. Compactified configuration space of the torus	21
3.2. The pure braid group on the torus	22
3.3. The \mathbf{PaB} -module \mathbf{PaB}_{ell} of parenthesized elliptic (or beak) braids	22
3.4. The $\mathbf{CD}(\mathbf{k})$ -module of elliptic chord diagrams	27
3.5. The $\mathbf{PaCD}(\mathbf{k})$ -module of parenthesized elliptic chord diagrams	29
3.6. Elliptic associators	30
3.7. Elliptic Grothendieck-Teichmüller group	31
3.8. Graded elliptic Grothendieck-Teichmüller group	32

3.9. Bitorsors	34
4. The module of parenthesized ellipsitomic braids	35
4.1. Compactified twisted configuration space of the torus	35
4.2. The Pa -module of labeled parenthesized permutation	36
4.3. The PaB -module of parenthesized ellipsitomic braids	37
4.4. The universal property of $\mathbf{PaB}_{ell}^\Gamma$	39
4.5. Ellipsitomic Grothendieck-Teichmüller groups	40
5. Ellipsitomic chord diagrams and ellipsitomic associators	43
5.1. Infinitesimal ellipsitomic braids	43
5.2. Horizontal ellipsitomic chord diagrams	45
5.3. Parenthesized ellipsitomic chord diagrams	48
5.4. Ellipsitomic associators	50
6. The KZB ellipsitomic associator	53
6.1. The pair $e^\Gamma(\tau)$	53
6.2. The ellipsitomic KZB system	54
6.3. Generators for the group $B_{1,n}^\Gamma$	56
6.4. The monodromy morphism $\mu_n : B_{1,n} \rightarrow \exp(\hat{\mathfrak{t}}_{1,n}^\Gamma) \rtimes (\Gamma^n \rtimes \mathfrak{S}_n)$	56
6.5. Formulæ for $\mu_n : B_{1,n} \rightarrow \exp(\hat{\mathfrak{t}}_{1,n}^\Gamma) \rtimes (\Gamma^n \rtimes \mathfrak{S}_n)$	59
6.6. Algebraic relations for the ellipsitomic KZB associator	60
7. Number theoretic aspects: Eisenstein series	63
7.1. Eisenstein series for SL_2^Γ	63
7.2. The coefficients $A_{s,\gamma}(\tau)$	67
7.3. Concluding remarks and outlook	69
An alternative presentation for $\mathbf{PaB}_{ell}^\Gamma$	71
A.1. An alternative presentation for \mathbf{PaB}_{ell}	71
A.2. An alternative presentation for $\mathbf{PaB}_{ell}^\Gamma$	74
Glossary	75
Bibliography	77
